GLOSSARY

TERM	DEFINITION	TERM	DEFINITION	
Ad-hoc request	a request for a train path which, on account of impossibility of knowing in advance the reason behind it, could not be considered in the regular process of preparation of the annual technical timetable.	Essential functions	means decision-making concerning train path allocation, including both the definition and the assessment of availability and the allocation of individual train paths, and decision-making concerning	
Allocation	means the allocation of railway infrastructure capacity by an infrastructure manager.		infrastructure charging, including determination and collection of charges, in accordance with the charging framework and the capacity allocation framework established by the Member States	
Alternative route	means another route between the same origin and destination where		pursuant to Articles 29 and 39 of the decree-law n.124-A/2018.	
_	there is substitutability between the two routes for the operation of the freight or passenger service concerned by the Railway Undertaking.	Framework agreement	means a legally binding general agreement under public or private law, setting out the rights and obligations of an applicant and the infrastructure manager in relation to the infrastructure capacity to be	
Applicant	means a Railway Undertaking or an international grouping of Railway Undertakings or other persons or legal entities, such as competent		allocated and the charges to be levied over a period longer than on working timetable period.	
	authorities under Regulation (EC) No 1370/2007 and shippers, freight forwarders and combined transport operators, with a public- service or commercial interest in procuring infrastructure capacity.	Heavy maintenance	means work that is not carried out routinely as part of day-to-day operations and requires the vehicle to be removed from service.	
Capacity-enhancement plan	· · · · ·	High speed passenger services	means passenger rail services operated without intermediate stops between two places separated at least by a distance of more than 200 km on specially built high-speed lines equipped for speeds generally equal or greater than 250 km/h and running on average at those speeds.	
Commercial timetable	the set of data defining all railway transport services provided by each railway company to the public.	Information to the Public	it consists of the provision to the passengers and overall users of railway facilitates of information of a variable and updated nature on	
Congested infrastructure	means an element of infrastructure for which demand for infrastructure capacity cannot be fully satisfied during certain		the running of trains, namely arrival and departure hours and lines, origin, destination and stops of traffic and delays.	
	periods even after coordination of the different requests for capacity.	Infrastructure capacity	means the potential to schedule train paths requested for an element	
Coordination	means the process through which the infrastructure manager and applicants will attempt to resolve situations in which there are conflicting applications for infrastructure capacity	Infrastructure manager	of infrastructure for a certain period. means any body or firm responsible for the operation, maintenance, and renewal of railway infrastructure on a network, as well as	
Cross-border agreement	means any agreement between two or more Member States or between Member States and third countries intended to facilitate the provision of cross-border rail services.		responsible for participating in its development as determined by the Member State within the framework of its general policy on development and financing of infrastructure.	
Development of the means network planning, financial and investment planning as well as the building and upgrading of the infrastructure.		Integrated public services for transport of passengers	The interconnected transport services within a given geographic area, with information service, ticketing service and integrated timetables.	

TERM	DEFINITION	TERM	DEFINITION	
International freight service	means a transport service where the train crosses at least one border of a Member State; the train may be joined and/or split and the different sections may have different origins and destinations, provided that all wagons cross at least one border.	Operator of service facility	means any public or private entity responsible for managing one or more service facilities or supplying one or more services to Railway Undertakings referred to in points 2 to 4 of Annex II of decree-law 124-A/2018.	
International	means a passenger service where the train crosses at least one	Railway infrastructure	means the items listed in Annex I of decree-law 124-A/2018.	
passenger service	border of a Member State and where the principal purpose of the service is to carry passengers between stations located in different Member States; the train may be joined and/or split, and the different sections may have different origins and destinations, provided that all carriages cross at least one border.	Railway Undertaking	means any public or private undertaking licensed according to this Directive, the principal business of which is to provide services for the transport of goods and/or passengers by rail with a requirement that the undertaking ensure traction; this also includes undertakings which provide traction only.	
Licence	means an authorisation issued by a licensing authority to an undertaking, by which its capacity to provide rail transport services as a Railway Undertaking is recognised; that capacity may be limited	Regional services	means transport services whose principal purpose is to meet the transport needs of a region, including a cross-border region.	
	to the provision of specific types of services.	Renewal of the railway infrastructure	means major substitution works on the existing infrastructure which do not change its overall performance.	
Licensing authority	hority means the body responsible for granting licences within a Member State.		the document certifying the railway transport company's specific	
Long-distance services	the transport services intended to meet the needs of national scope, between various cities or conurbations, and of super-regional scope.	Safety certificate	capacity to operate in compliance with all safety rules in each route and for a given type of service.	
Maintenance of the railway infrastructure	means works intended to maintain the condition and capability of existing infrastructure.	Safety Management System (SMS)	the organisation and provisions adopted by the infrastructure manager or by a railway transport company in order to ensure the management safety of its operations.	
Marshalling yards	The branch lines exclusively intended for the temporary parking of railway vehicles between two services.	Service facilities	means the installation, including ground area, building and equipment, which has been specially arranged, as a whole or in part,	
Network	means the entire railway infrastructure managed by an infrastructure manager.		to allow the supply of one or more services referred to in points 2 to 4 of Annex II of the decree-law 124-A/2018.	
Network statement	means the statement which sets out in detail the general rules, deadlines, procedures and criteria for charging and capacity- allocation schemes, including such other information as is required to enable applications for infrastructure capacity.	Shunting	movement of railway vehicles, on a line, or from one line to another, which may be a forward movement or a backward movement. General Instruction no. 4 of the IMT (Portuguese Mobility and Land Transport Institute) technically characterises the service.	
Operation of the railway infrastructure	means train path allocation, traffic management and infrastructure charging.	Upgrade of the railway infrastructure (modernisation)	means major modification works to the infrastructure which improve its overall performance.	

TERM	DEFINITION
Urban and suburban services	means transport services whose principal purpose is to meet the transport needs of an urban centre or conurbation, including a cross- border conurbation, together with transport needs between such a centre or conurbation and surrounding areas.
Viable alternative	means access to another service facility which is economically acceptable to the Railway Undertaking and allows it to operate the freight or passenger service concerned.
Train path	means the infrastructure capacity needed to run a train between two places over a given period.
Working timetable	means the data defining all planned train and rolling-stock movements which will take place on the relevant infrastructure during the period for which it is in force.

1.7 COOPERATION BETWEEN EUROPEAN IMS/ABS

1. GENERAL INFORMATION

1.1 INTRODUCTION

Infrastructure Portugal, S.A. (IP) is a public company whose creation resulted from the merger by incorporation of EP - Estradas de Portugal, SA on REFER - National Railway Network, EPE. IP S.A wishes to contribute to sustainable mobility within the European rail network in order to boost economic and social development in of its network.

As the rail infrastructure manager IP offers its customers, a competitive and qualitative railway infrastructure, adapted to their needs.

According to Decree-Law No. 91/2015 of 29 May, the IP aims at the design, construction, financing, maintenance, operation, rehabilitation, enlargement and modernization of road and rail national networks.

The IP macrostructure is presented below:

The relationship interaction with the RUs and the regulated market in general is the responsibility of the Corporate Strategy, Planning and Control Department, who forges a core business relationship, offering railway services following fair and impartial criteria.

In this organisational structure, it is the task of the Operations Direction to manage the capacity allocation process and the rail traffic control and command.

The Group of Infraestruturas de Portugal integrates the following companies:

IP Engenharia is aimed at drawing up studies and projects on transportation engineering and manage, coordinate, supervise works and promoting the international business of the IP Group.

IP Telecom is aimed at ensuring the supply and provision of services of Information and Communication Systems and Technologies, based on innovative solutions focused on Cloud and Safety technologies and on the main national telecommunications infrastructure, built on fibre optics and on the railway technical channel, for the Business Market and Public Entities.

IP Património is aimed at operating within the scope of the acquisition, expropriation, registration update and disposal of immovable property or establishment of rights over them, as well as the profitable use of assets allocated to the granting or autonomous assets of the IP Group, and the management and exploitation of stations and equipment related thereto, including the corresponding operational management.

1.2 PURPOSE OF THE NETWORK STATEMENT

The scope of the Network Statement is to inform the applicants, authorities and all stakeholders of the general terms and conditions for acquiring capacity and the inherent services regarding the national railway network, as well as the corresponding charged fees.

The Network Statement is produced according to article 27 and its Annex IV of Directive 2012/34UE, transposed to Decree/Law no. 217/2015.

1.3 LEGAL ASPECTS

1.3.1 Legal Framework

The main laws in force in Portugal are itemized in <u>Annex 1.3</u>.

1.3.2 Legal Status and Liability

The contents of the Network Statement must be followed by the RUs that use the Portuguese Rail Network, especially regarding the technical conditions of the operations and their restrictions, capacity allocation and pricing without loss for <u>section 1.3.3</u>.

IP doesn't take into account responsibilities to the information related to the service facilities which aren't maintained by them.

Neither does IP can be held liable for errors in the Network Statement, although it will correct them as soon as they are found.

The publication of the present Network Statement was preceded by consultation to Interested parties, such as RUs that are either operating, or licensed to operate, on Portuguese railway lines at the date this document was prepared.

In the event of any material differences between the Network Statement and legislation currently in force, the latter prevails.

Information concerning the infrastructure contained in this Network Statement is based on facts known at this document publication date, regarding the foreseeable situation for the 2023 working timetable period.

The content of the Network Statement should be subject to updates during his validity period whenever necessary, namely in what concerns reasons the charging occurring from legal impositions.

IP has prepared this Network Statement with the highest degree of thoroughness possible and in accordance with its best knowledge at the time of publication and cannot be held responsible for changes to the engineering

works programme arising from decisions by the government or other public entities.

1.3.3 Appeals Procedure

Under the terms of article 56 of Decree-law 217/2015, applicants can appeal to AMT if they believe that they have been unfairly treated, discriminated against or in any other way aggrieved, and in particular against decisions adopted by the infrastructure manager concerning:

- a) The provisional and final versions of the network statement;
- b) Criteria contained within it;
- c) The allocation process and its results;
- d) The charging scheme;
- e) Level or structure of infrastructure fees which they are, or may be, required to pay;
- f) Provisions concerning access;
- g) Access to services and charging.

After lodging a complaint, AMT may, if it decides so, request information which they deem appropriate, consulting all relevant bodies within 30 days of receipt of the complaint.

Following receipt of all information deemed relevant for the analysis of all complaints received, AMT shall adopt measures to solve the situation, informing interested parties of its decision, which must be grounded, within a period that shall not exceed 45 working days.

AMT's decisions shall be binding on all parties covered by these decisions and must not be subject to administrative opposition.

AMT's decisions may, under the law, give rise to proceedings before a court, which will only have a suspensive effect if the decision is likely to bring irreparable losses or manifestly excessive for the applicant.

AMT's decisions are publicised on its website (https://www.amt-autoridade.pt/).

1.4 STRUCTURE OF THE NETWORK STATEMENT

The structure of this NS follows the Network Statement Common Structure and Implementation Guide, adopted by European Infrastructure Managers belonging to RailNetEurope (RNE), based on the applicable European legal framework. The document is revised when needed and the most recent version is available on the RNE website (http://www.rne.eu/network-statement).

The goal of the Common Structure and Implementation Guide is that all applicants and interested parties can find the same information at the same place in each NS.

The NS is thus structured in 7 sections constituting the main body of the document and appendixes giving further details:

- <u>Section 1</u> provides general information about the NS and contacts.
- <u>Section 2</u> describes the main technical and functional characteristics of the IM's network.
- <u>Section 3</u> defines the legal requirements and access conditions to the IM's network.
- <u>Section 4</u> sets the procedure for the allocation of the train paths.
- <u>Section 5</u> gives an overview of the services provided by IP, as well as the charges for these services. The incentive schemes are also described in this section.
- <u>Section 6</u> describes the traffic management procedures, including the procedures to be followed in the event of incidents.
- <u>Section 7</u> provides an overview of the service facilities connected to thee IM's network.

<u>Annexes</u> – are formed as the information support which appears at the document mainframe. The annexes identification relates directly to the chapters numbering of the Network Statement main body.

1.5 VALIDITY PERIOD, UPDATING AND PUBLISHING

1.5.1 Validity Period

The 2024 Network Statement applies to capacity requests and execution of timetabled transport operations during the 2024 Timetable starting on Sunday 10 December 2023 00h00 and ending on Saturday 14 December 2024 24h00.

The present Network Statement comes into force on Sunday 11 December 2022 at 00h00am.

1.5.2 Updating

The publication of each Network Statement is preceded by consultation to Interested parties.

While the Network Statement is in force, any important changes in information contained therein will be published as addenda to this document following consultation with interested parties, such as the RUs.

The consultation process lasts 15 working days.

1.5.3 Publishing

The Network Statement is drawn and published in Portuguese and published in Portuguese and English on the IP website (<u>https://servicos.infraestruturasdeportugal.pt/pt-pt/parceiros/operacao-</u> <u>ferroviaria/os-nossos-servicos/diretorio-da-rede-ips</u>) where it is available free of charge in electronic format

In the event of inconsistencies or interpretation difficulties between versions, the Portuguese version prevails.

1.7 COOPERATION BETWEEN EUROPEAN IMs/ABs

1.7.1 Rail Freight Corridors

Regulation (EU) No. 913/2010 concerning a European rail network for competitive freight required Member States to establish international marketoriented Rail Freight Corridors (RFCs) to meet the following goals:

- strengthening co-operation between IMs/ABs on key aspects such as the allocation of paths, deployment of interoperable systems and infrastructure development,
- finding the right balance between freight and passenger traffic along the RFCs, giving adequate capacity for freight in line with market needs and ensuring that common punctuality targets for freight trains are met,
- promoting intermodality between rail and other transport modes by integrating terminals into the corridor management process.

IP integrates the Atlantic Corridor, originally designated Rail Freight Corridor no. 4 (RFC4), which is composed of the existing and projected railway infrastructure sections between Sines/Setúbal/ Lisbon/Aveiro/Leixões – Algeciras/Madrid/Bilbao – Bordeaux/Paris/Le Havre/Metz, crossing the Vilar Formoso/Fuentes de Oñoro, Elvas/Badajoz, Irún/Hendaya and Forbach/Saarbrücken borders.

The mission of the Atlantic Corridor is based on making the most of the existing railway infrastructure and on promoting articulation between the Infrastructure Managers and the Railway Operators, through centralised management of capacity allocation, traffic management and the relationship with rail freight clients.

In addition, the Atlantic Corridor is also a privileged platform for harmonising processes and coordinating investments in the railway infrastructure in Portugal, Spain, France, and Germany, fostering greater competitiveness in rail freight transport.

All relevant Corridor-related information is available at <u>https://www.atlantic-corridor.eu</u>

1.7.1 RailNetEurope and Other International Cooperation

IP is a member of RailNetEurope (RNE), which is an umbrella organization of European railway Infrastructure Managers and Allocation Bodies (IMs/ABs). RNE facilitates international railway business by developing harmonized international business processes in the form of templates, handbooks, and guidelines, as well as IT tools. You can find more information about RNE on: www.rne.eu/

It is also mentioned that the NCI portal (NCI (rne.eu)) which allows advanced search functions for all European Network Statements as well as for Corridor Information Documents, started operating at the beginning of 2022.

Within the scope of the international cooperation in the railway sector, the following organizations, of which IP is a member, are worthy of note:

• UIC - Union Internationale des Chemins de Fer

It was founded in 1922 with the goal of establishing consistent conditions for the railway activity, and it is the world's most relevant organization for cooperation between railway companies. The scope of its action is comprehensive, with a strong focus on the technical element, benefitting both Railway Undertakings, public or private, and infrastructure managers, integrated companies and other entities connected to the railway field. UIC currently includes aroundt 200 members from all continents and addresses the most varied topics related to the railway activity, from safety to logistics, signalling and transport of passengers and cargo, with special focus on the area of standardisation.

More information can be found on: <u>www.uic.org</u>

• EIM - European Rail Infrastructure Managers

This lobby association, created in 2002, integrates independent managers of railway infrastructures and constitutes the sole association that exclusively represents the interests of these entities with the Community institutions.

The association intends to contribute to the development of the European Transport Policy and ensure that Community legislation provides for an

efficient use of the existing infrastructure and the development of new infrastructures; the efficient, cost-effective, and appropriate implementation of the interoperability process; the management of railway safety; as well as the meeting of the needs of the current and future railway operators.

The association was mandated by the European Commission to provide, since 2005, experts to the Work Groups of the European Railway Agency, in charge of the technical interoperability and safety of the railway sector in Europe.

More information can be found on: www.eimrail.org

• PRIME - Platform of Rail Infrastructure Managers in Europe

PRIME is a platform that allows direct interaction between the European Commission's Directorate-General for Mobility and Transport (DG-MOVE) and the railway infrastructure managers, enabling a timely discussion of legislative initiatives and a closer cooperation between railway companies.

The platform was created to promote cooperation in key areas for the development of a safe, sustainable, high-performing and value-added European rail network.

PRIME member companies are invited to discuss the major challenges for the management of railway infrastructure in Europe, namely infrastructure financing, railway safety, digitalisation, as well as intermodality and co-modality.

Moreinformationcanbefoundon:https://webgate.ec.europa.eu/multisite/primeinfrastructure/prime-news_en

• CHRISTINE - CHarging of Rail InfraSTructure IN Europe

Work Group created in 2007 and devoted to study railways infrastructure pricing. It assumes a technical and informal nature and is composed of experts from the financial, pricing, planning and strategic areas, mostly representing the European infrastructures managers but also regulators. These experts meet on an annual basis to present and discuss the developments of the sector and promote the exchange of ideas and the identification of solutions.

INFRASTRUCTURE

2.1 INTRODUCTION

2.2 NETWORK DESCRIPTION

2.3 NETWORK DESCRIPTION

2.4 TRAFFIC RESTRICTIONS

2.5 AVAILABILITY OF THE INFRASTRUCTURE

2.6 INFRASTRUCTURE DEVELOPMENT

2. INFRASTRUCTURE

2.1 INTRODUCTION

This chapter contains a description of the functional and technical characteristics of the railway infrastructure managed by IP. It is formulated for the purpose of meeting existing and new Railway Undertakings' information needs in connection with their planning of railway traffic.

The maps presented in the Annexes related to this chapter and the summary table contained in <u>Annex 2.1</u> concern the conditions that IP, resorting to criteria of reasonable diligence, predicts to take place during the validity of the present Statement.

2.2 EXTENT OF NETWORK

2.2.1 Limits

The Network Statement describes the lines, branches and junctions managed by IP, which are shown in <u>Annex 2.2.1</u>.

2.2.2 Connecting Railway Networks

The infrastructure managed by IP is connected to ADIF rail network at three points as shown in the following table:

INTERNATIONAL LINKS				
	LIMITS			
LINE	Portuguese	Distance to	Spanish Railway	Distance to
	Railway Station	Border (km)	Station	Border (km)
Beira Alta Line*	Vilar Formoso	0,267	Fuentes de Oñoro	0,935
Minho Line	Valença	1,680	Tuy	2,715

* These connections are part of the Atlantic Corridor, whose information can be checked at www.atlantic-corridor.eu

Details about the Spanish rail infrastructure are available at www.adif.es.

2.3 NETWORK DESCRIPTION

2.3.1 Track Typologies

<u>Annex 2.3.1</u> has a map showing the different kinds of track and distances (single, double and multiple track sections) and the distances between important points in the network.

2.3.2 Track Gauges

The railway infrastructure covered by the Network Statement has Iberian gauge with 1668 mm between the inner faces of the rails, with the exception of the Vouga line for which this distance is 1000 mm.

2.3.3 Stations and Nodes

<u>Annex 2.3.3</u> provides information on the usable lengths of running and secondary lines of the stations and the electrified extent of each one. This annex constitutes an integral part of the Network Statement and is set apart solely due to a need to improve the quality of its presentation.

This Annex shows the traffic lines in the stations including: the useful length (maximum length of a train) for each one; the lengths of the platforms (passenger trains must respect the given dimensions whenever passengers board or disembark at the stations); and the height of the platforms.

IET 50 contains information on the distance between each station and halt of the railway network lines in operation.

Authorization to park on secondary railways (not assigned for traffic) depends on approval from traffic management.

2.3.4 Loading Gauge

The reference kinematic profile (RKP) is defined as a reference line that represents a cross section perpendicular to the axis of the track, regarding which a set of rules of rolling stock sizing and obstacles distancing applies.

The fulfilment of the rules ensures traffic safety since it prevents the vehicles from interfering with the fixed installations or interfering with one another in adjacent tracks.

<u>Annex 2.3.4 A</u> presents the map representing the kinetic profiles of the railway network, the PTb, the PTb+, the PTc and that of the Cascais Line, the latter being specific of this line.

<u>Annex 2.3.4 B</u> indicates the size of the kinetic profiles PTb, the PTb+, the PTc and that of the Cascais Line, as stated in standard EN 1527-3.

2.3.5 Weight Limits

<u>Annex 2.3.5</u> shows maximum loads over the network according to UIC form 700-0.

2.3.6 Line Gradients

Characteristics Ramps

The figures of the characteristic ramps stated in <u>Annex 2.3.6 A</u> and <u>Annex 2.3.6</u> <u>B</u>, correspond to the most restrictive compensated profile of the itinerary in question (between dependencies), taking into account the corrections for the non-significant ramps. They result from the calculation of the characteristic ramp, for each itinerary, rounded down to the unit.

Locomotive Loads

The maximum loads hauled by the locomotives are described in IET 51 – Annex 1 – Maximum Hauled Loads, and the restrictions imposed by the infrastructure are described in IET 51 Annex 2 – Traction Conditions Imposed by the Infrastructure.

2.3.7 Maximum Line Speeds

<u>Annex 2.3.7</u> shows qualitative information about the maximum levels of speed available in the main sections of each of the lines.

The maximum speed levels used in the 2024 Timetable, are published in the Maximum Speed Limits Table (TVM – Tabela de Velocidades Máximas) in force when this Network Statement is published. IP does not foresee alterations to the TVM with significant impact in the 2024 Timetable. The TVM can be found on the IP website, through the eViriato app (<u>https://eviriato.refer.pt/eviriato/</u>).

2.3.8 Maximum Train Lengths

<u>Annex 2.3.8</u> shows a chart with types and allowed maximum lengths of the freight trains that must be considered in the capacity allocation process.

2.3.9 Power Supply

<u>Annex 2.3.9 A</u> shows a map indicating the electrified network sections and its supply voltages.

Annex 2.3.9 B shows the electrical substations and its interference areas.

2.3.10 Signalling Systems

Overall, there are three signalling systems in the network:

- Mechanical;
- Electrical;
- Electronic.

The mechanical systems are composed of interlockings and mechanical signals and manually commanded points.

The electrical systems are composed of interlockings and local panels, electrical signals, and electrically commanded points.

The electronic systems are composed of electronic interlockings, electrical signals and electrically commanded points, normally have a centralized command from the Operational Command Centres (OCC) and are associated

with a set of features, namely provision of information through graphics and an automatic follow-up and computer programming of itineraries.

Each of these systems is associated with operation schemes in the network, indicated in <u>Annex 2.3.10</u>.

The Signalling Instructions by network sections are provided to the stakeholders, upon request, against payment of an amount corresponding to the publication cost.

2.3.11 Traffic Control Systems

The traffic control at IP is carried out in the Operational Control Centres (OCC's), which also include the traffic command function. The OCC's are multidisciplinary centres with a regional coverage, aiming the coordination and supervision of all the functions and activities related to the operational procedures of railway exploitation and traffic management in its area of scope.

<u>Annex 2.3.11</u> shows a map with the territorial coverage of each one of the OCC's in operation.

2.3.12 Communication Systems

<u>Annex 2.3.12</u> shows a map with the line sections which are covered by the ground train radio link system.

2.3.13 Train Control Systems

The system for controlling the speed of trains, named CONVEL, is installed in the railway network, and its implementation map can be found in <u>Annex 2.3.13</u>.

Exceptionally, there is a different system, named automatic braking system, installed in the Cascais Line.

2.4 TRAFFIC RESTRICTIONS

2.4.1 Specialized Infrastructure

No part of the rail network managed by IP is classified as "specialized infrastructure", in accordance with the terms stated in article 49° of Decree-Law 217/2015.

2.4.2 Environmental Restrictions

The operation of the national railway network is subject to compliance with the limit values set in the General Regulation on Noise (RGR – Regulamento Geral do Ruído), published through Decree-Law 9/2007, rectified by Rectification Declaration No. 18/2007, of March 16. In certain areas of the network, it is necessary to adopt measures to reduce noise levels, which must be implemented, under the provisions in article 19(3) of the RGR, firstly on the source of the noise source and only then on the propagation path.

IP may set restrictions to traffic based on the values verified through noise indicators.

Provisions in Regulation (EU) no. 1304/2014 of the Commission, with changes introduced by the Implementing Regulation (EU) no. 2019/774 of the Commission, of 16 May 2019, on the Technical Specification for Interoperability for the subsystem "rolling stock-noise" (TSI Noise) of the Union's railway system.

2.4.3 Dangerous Goods

The transport of dangerous goods is governed by Decree-Law no. 99/2021, from November 17th, which transposes the international regulations in force, within the scope of the transport of dangerous goods (RID).

2.4.4 Tunnel Restrictions

The movement of trains that include open wagons in their composition, i.e., wagons without cover, with bulk cargo (sand, timber, etc.), requires the conditioning of speed when approaching and crossing Tunnels, being mandatory to observe the maximum speed of 45 km/h, unless specific, more demanding conditioning is communicated.

2.4.5 Tunnel Restrictions

Bridge restrictions are listed in IET 51.

2.5 AVAILABILITY OF THE INFRASTRUCTURE

The rail network managed by IP is available every day of the year, 24 hours a day. However, modernization works, and maintenance interventions may impose restrictions on rail traffic. These items are dealt with in <u>Section 4</u> of this document.

2.6 INFRASTRUCTURE DEVELOPMENT

According to the infrastructure investment plan "Ferrovia 2020", several investments in railway infrastructure have been foreseen, summarized in <u>Annex 2.6</u>.

ACCESS CONDITIONS

3.1 INTRODUCTION3.2 GENERAL ACCESS REQUIREMENTS3.3 CONTRACTUAL ARRANGEMENTS3.4 SPECIFIC ACCESS REQUIREMENTS

3. ACCESS CONDITIONS

3.1 INTRODUCTION

Section 3 of this Network Statement describes the terms and conditions related to access to the railway infrastructure.

These terms and conditions also apply to the Atlantic Corridor.

3.2 GENERAL ACCESS REQUIREMENTS

3.2.1 CONDITIONS FOR APPLYING FOR CAPACITY

The main requirement for a company to be able to request a train path is to fulfil the conditions laid down for applicants. Applicants may be:

- a) licensed Railway Undertakings;
- b) international groups of rail transport companies and other individuals or companies with a public service or commercial interest in acquiring infrastructure capacity for rail service operations including public authorities under Regulation (EEC) No. 1370/2007 of European Parliament and the Council;
- c) shippers, forwarders, and combined transport operators using rail services.

3.2.2 Conditions for Access to the Railway Infrastructure

The railway transport companies operating in any Member State of the European Union are entitled to access the national railway infrastructure to operate any type of freight or international passenger railway service, without prejudice to the exceptions and transitional regime established in the national and European Union legal systems.

In the case of national rail passenger services, the following provisions apply: Regulation (EC) 1370/2007 of the European Parliament and of the Council of 23 October 2007, amended by Regulation (EU) 2016/2338 of the European Parliament and of the Council of 14 December 2016, and Decree-Law No. 217/2015 as amended and republished by Decree-Law No. 124-A/2018 transposing Directive (EU) 2016/2370 of the European Parliament and of the Council of 14 December 2016 (amending Directive 2012/34/EU).

The above-mentioned rights depend on the signing of an agreement with IP, as referred to in <u>section 3.3.2</u> bellow.

3.2.3 Licences

Portuguese companies that operate or wish to operate rail transport services must hold an access licence issued by the IMT or by a licensing authority in another European Union member state.

The issue of licence by the IMT depends upon the compliance with the requirements as to good reputation, financial capacity, and professional competence and generally the fulfilment of applicable legal and regulatory rules.

Valid licences issued by licensing authorities of other European Union Member States for the rail transport companies are valid in the country just as those issued by the IMT for companies established in Portugal.

3.2.4 Safety Certificate

Companies interested in operating on the National Railway Network must hold a Single Safety Certificate.

It is the responsibility of IMT, as the National Railway Safety Authority, to issue the safety authorizations, under the terms of article 12 of Decree-Law 85/2020 of 13 October.

The issuing of the Single Safety Certificate is the responsibility of IMT or the European Union Railway Agency (Agency), as applicable, under article 10 of Decree-Law 85/2020 of 13 October.

Commission Delegated Regulation (EU) 2018/762 of 8 March sets out the common safety methods relating to the requirements of the company safety management system necessary to obtain a railway safety certificate. Commission Implementing Regulation (EU) 2018/763 of 9 April sets out the procedures for issuing Safety Certificates to Undertakings providing rail transport services.

The requirements listed by IMT to obtain the Safety Certificate by the candidate companies are:

- Having a proper Safety Management System for the service/circulation lines, including procedures for emergency situations compatible with those from the infrastructure manager and procedures which ensure compliance with the national applicable standards for service/circulation lines, staff and rolling stock.
- Having a proper management of operations, including particularly:
 - · Surveillance of circulating rolling stock;
 - Train formation, their tests and verifications before departure;
 - · Driving, follow-up of driving and shunting rolling stock;
 - Transportation of dangerous goods, when applicable.
- Having rolling stock compatible with the infrastructure for the service/circulation lines to be used; having authorizations for circulating in such lines; having a proper maintenance program for the rolling stock and service/circulating lines to be used.
- Having qualified and certified staff, when requested, for correctly performing the relevant Safety functions, namely:
 - · Driving, follow-up of driving and shunting of rolling stock;
 - · Train formation, their tests and verifications before departure;
 - · Inspection of circulating rolling stock;
 - · Transportation of dangerous goods.

3.2.5 Insurance

Risks involved by the RU activities, particularly those involving accidents causing damages to passengers, rail infrastructure, luggage, freight, mail and third parties, must be covered by civil liability insurance.

The RUs have a responsibility towards IP and/or third parties for losses and damages caused by the rolling stock on the infrastructure regardless of the ownership of the rolling stock, except in the case of normal wear and tear of the infrastructure.

The Insurance policy capital cannot be, in any situation, less than EUR 10.000.000 (ten million euros) while the other conditions, including the current values of the insured capital set by government order as stipulated in article 22, section 2 of Decree-law 217/2015, of October 7, republished by Decree-Law 124-A/2018, of December 31, and article 7 of Resolution 454/2019 of the Governing Board of the Institute of Mobility and Transport, IP.

Railway Companies must submit a draft of the policy to be subscribed, the content of which shows unequivocal compliance with the provisions of Article 22 of Decree-Law 217/2015, as well as the adequacy between the geographical scope of the policy and the scope in which the activity is developed.

3.3 CONTRACTUAL ARRANGEMENTS

3.3.1 Framework Agreement

Framework Agreements may be drawn up between IP and an Applicant, specifying the capacity characteristics of the requested infrastructure by the applicant which IP will supply for a longer period than the length of one timetable. The framework agreement must be drawn up in order to meet the legitimate business needs of the applicant and shall not be such as to preclude the use of the relevant infrastructure by other applicants or services.

A Framework Agreement shall cover a period of five years, renewable for equal periods, without prejudice to the acceptance by the infrastructure manager of a longer or shorter period. A framework agreement longer than five years shall be justified by the existence of commercial contracts or specific investments or risks.

Framework Agreements must be previously approved by the AMT after having heard the Competition Authority.

Procedures and criteria pertaining to the allocation of railway infrastructure capacity must be in line with the Implementing Regulation (EU) 2016/545 and with the provisions of the Decree-Law no. 124-A/2018, particularly of its article 42.

<u>Annex 3.3.1</u> provides the Model Framework Agreement.

3.3.2 Contracts with RUs

Access and transit rights over the national railway infrastructure requires an Access Contract with IP, covering administrative, technical, and financial aspects and the ruling of traffic safety and control issues.

IP will ensure fair and non-discriminatory conditions whenever it signs a contract.

3.3.3 Contracts with No RUs Applicants

The applicants which aren't RUs detaining an access license, must register at IP by signing an acceptance statement of all the terms in the Network Statement, before presenting its first capacity request. IP can ask these applicants for additional information so that their eligibility is confirmed, while respecting the principles of equal treatment and transparency.

The applicants may ask for capacity without previously notifying the Railway Undertaking which will be supplying its traction, however they must notify IP with the identification of the Railway Undertaking, along with its formal acceptance of the service performance, and with 30 working days of minimum anticipation relating to the circulation day. In the case of this full information won't be presented in time, IP can cancel the assigned train path.

Just after the formal identification of the Applicant, the Railway Undertaking assumes the payment of all the infrastructures user fees.

The applicant will be submitted to the payment of the tariffs relating to the capacity asked and not used, defined at <u>section 5.6.3</u>, in the following situations:

- a) Whenever it has been decided to cancel train paths already assigned for IP, before the formal identification of the Railway Undertaking;
- b) Whenever exceeding the term of 30 working days in advance in the identification of the rail Railway Undertaking, leading to IP to cancel the channel.

3.3.4 General Terms and Conditions

IP does not have a General Terms and Conditions document.

3.4 SPECIFIC ACCESS REQUIREMENTS

3.4.1 Rolling Stock Acceptance

The procedure for accepting the rolling stock is governed by Implementing Regulation (UE)2018/545 of 4 April 2018.

As regards the National Railway Network specific cases, whose technical rules were communicated to the European Railway Agency, the compliance shall be necessarily checked by entity to be appointed by IMT. The national technical rules are listed in IP's standard GR.IT.GER.009.

3.4.2 Staff Acceptance

IMT is responsible for certifying the staff assigned to regulated companies and bodies in the cases where such staff begin their operations in relevant activities for the Safety of the National Railway Network Operation. Certification shall be requested by the employer entity. IMT is also responsible for renewing the certificates.

The activities relevant for the Safety of Operation are as follows:

- Driving of motor units, as per Law 16/2011;
- Follow-up of trains (at the driver's cabin of the motor units, by another agent rather than the driver);

- Follow-up of the movement of rolling stock in tracks closed to circulation;
- Preparation of trains (including formation and deformation of trains, verification of the load condition in vehicles transporting goods and tests before departure);
- Traffic command and control (including train circulation activities and shunting command activities in lines).

REQUIREMENTS

IMT certifies individuals that reach a process involving the following steps: medical exams; psychological assessment; training; vocational exams; professional work experience, as per Decrees 213/2020 and 2014/2020.

3.4.3 Exceptional Consignments

An exceptional transport corresponds to a situation where at least one operational / regulatory condition is not applied, or one of the infrastructure limit features is not respected by the rolling stock, but which can still be carried out under special conditions to be defined by IP, to be published under a Special Circulation Permit.

3.4.4 Dangerous Goods

Dangerous goods mean substances and articles the transport of which is forbidden according to RID (Regulation concerning the International Carriage of Dangerous Goods by Rail) or only authorized under specific conditions.

Rail transport of dangerous goods is regulated by Decree-Law 41-A/2010, of 29 of April, amended by Decree-Law 24-B/2020, of 8 of June, including Annex II "Regulation of the Transport of Dangerous Goods by Rail ". Annex II says which dangerous goods can be carried by rail and the terms under which the goods can be carried.

For details on the process for allocating capacities for the transport of dangerous goods, see <u>section 4.7</u> and <u>section 5.4.3</u> of this Network Statement.

SAFETY ADVISORS

Companies with activities that include railway transportation operations and loading or unloading of hazardous goods connected to the railway must indicate one, or more, Safety Adviser(s) to monitor the conditions for carrying out such transportation operations. Safety Advisers shall cooperate in the prevention of risks for people, goods, or environment, inherent to the referred operations.

Deliberation 517/2018, of 15th March (published in the Diário da República,2nd Series on 20th April)ril, describes the requirements that Safety Advisor training companies, courses, examinations and certification must comply with.

The crew of trains carrying dangerous goods must be trained, with documentary evidence, to meet the requirements of the RID.

3.4.5 Test Trains and Other Special Trains

Special runnings destined for rolling stock testing are subject to the issue of a Traffic Special Authorization by IP, in case the operational, regulatory, or technical conditions are not obeyed.

For new or upgraded rolling stock it applies as described in Section "4.7 Line Tests" of the IMT Implementation Guide regarding "Authorization for placing vehicles on the market".

CAPACITY ALLOCATION

4.1 INTRODUCTION

4.2 GENERAL DESCRIPTION OF THE PROCESS

4.3 RESERVING CAPACITY FOR TEMPORARY CAPACITY RESTRICTIONS

4.4 IMPACTS OF FRAMEWORK AGREEMENTS

4.5 PATH ALLOCATION PROCESS

4.6 CONGESTED INFRASTRUCTURE

4.7 EXCEPTIONAL TRANSPORT AND DANGEROUS GOODS

4.8 RULES AFTER PATH ALLOCATION

4.9 REDESIGN OF THE INTERNATIONAL TIMETABLING PROCESS (TTR)

4.10 CAPACITY ALLOCATION PRINCIPLES FOR THE RFCs

4. CAPACITY ALLOCATION

4.1 INTRODUCTION

IP designs and allocates train paths in accordance with Decree-Law no. 217/2015, in particular Section III of chapter IV, Annex IV and Annex VII.

4.2 GENERAL DESCRIPTION OF THE PROCESS

RELEVANT BODIES

Entities that take part in the process of capacity allocation:

- Applicants, who are responsible for making capacity requests and taking part in the allocation process. Applicants can also appeal against any timetable proposal. The applicants, or the RUs who substitute them in terms of access or route, are responsible for publishing all timetables for public use;
- IP, which has responsibility in producing the Network Statement, the drawing up and presentation of the working timetable and the coordination of capacity allocation;
- One-Stop-Shop (OSS) which is responsible for the reception and processing of passenger and freight international path requests, not covered by Atlantic Corridor;
- One-Stop-Shop (C-OSS) of Atlantic Corridor, which is responsible for the reception and processing of passenger and freight international path requests covering, even if partially, a Pre-arranged Path (PAP).

CONTACTS

The contacts of the IP department responsible for the capacity allocation of, the IP OSS and OSS of Atlantic Corridor are listed in section 1.6 above.

Applicants must provide a list of agents who will represent them in the Capacity Allocation Process.

DOCUMENTS FORMAT

Pedidos de Canais Horários

Train path requests contain the following:

- Service specification, including frequency regime, service type and relevant information regarding the train path study;
- Details of rolling stock (locomotive and towed rolling stock) to be used including the vehicle serial number and the number of locomotive and towed units;
- Details of train runs including speed type, train tonnage, length, brake type;
- Special conditions, if any, to be considered in programming of paths, whether due to towed material, type of goods transported, or type of service to be performed;
- Reference hours of trains departure and/or arrival in the stations or branches significant to the service, train stopping patterns and minimum time of commercial stop, including the possible margins;
- Times for technical stoppages for operational activities by the RU;
- Minimum time of occupation, (for example loading or unloading) before or after the beginning/ending of the service;
- Material follow-up (motor and towed) to ensure;
- Transfers to be ensured.

Complementarily, the Applicants must send information on train follow-up or locomotive rotation plan, in case it already exists.

<u>Annex 4.2</u> presents a model for train path requests. These requests must be presented electronically through the e-Viriato web application available on the IP website or directly on <u>https://eviriato.refer.pt/eviriato/</u>.

For international passengers or freight train paths, including the Atlantic Corridor related, the requests should also be made through PCS application, available in http://pcs.rne.eu.

PCS is an international system for coordinating requests for capacity for Railway Undertakings, Applicants, Infrastructure Managers, Capacity Allocation Entities and Rail Freight Corridors. PCS is an IT application that

optimizes the coordination of the international requests, ensuring that the respective applications and offers are standardized across all stakeholders.

PCS is the sole tool allowing for the request for capacity of PaP and the Capacity Reservation regarding the management of the Rail Freight Corridors' international capacity.

Access to PCS is free of charge and may be requested through RNE PCS: <u>support.pcs@rne.eu</u>.

More information can be found on <u>http://pcs.rne.eu</u>

ANNUAL WORKING TIMETABLE

The annual working timetable document contains the following:

- Type of service, type of speed, the towage weight, frequency, the series of the traction unit and type of braking on the train;
- Departure and arrival times of trains at origin, destination and intermediate stations.

The Technical Schedule includes, apart from the mentioned on the previous points, the following elements:

- Type of train brake;
- Passage hours at intermediate stations and at check points;
- Time granted programmed itinerary time elapsed between two points identified in the schedule, which includes the regularity margins and supplementary margins
 - Regularity Time Margins added to the running time needed to compensate for the effects of speed restrictions due to maintenance works and random variables of the journey time that may include:
 - · Operational technical incidents
 - Restraints imposed by external forces (weather conditions, third parties, etc.)
 - Longer than expected stopping times due to strong influx of passengers

- · Sequential delays or impacts caused by other trains;
- Supplementary Time margins added to the time needed to guarantee punctuality during track modernisation or long-term heavy maintenance or the interaction of trains caused namely by the configuration of the infrastructure
- Special indications, particularly overtaking and crossings on single-track, double-track and multiple-track sections.

Independence Restoration Day	1-Dec-2024
Imaculada Conceição Day	8-Dec-2024

NOTE: If a day is simultaneously a holiday eve and following an official holiday, for example the Easter Saturday, it will be considered as being only a holiday eve.

4.3 RESERVING CAPACITY FOR TEMPORARY CAPACITY RESTRICTIONS

4.3.1 General Principles

To guarantee levels of quality, safety, reliability and development in infrastructure, or to enable projects from external entities IP needs to reserve part of its available capacity for works per time periods or train speed limitations, per lines and sections.

Where IP needs to use the paths which interfere with the works on the infrastructure, the applicants will be entitled to compensation as described below.

These periods are scaled according to the nature and complexity of the work, by minimizing, wherever possible, the impacts on the paths. For each line section, periods of 4 (four) continuous hours, called "Blue Zones" will be defined. These periods can be found in the Blue Zone Table on the IP website, via the eViriato application.

In the case of major impact interventions in the infrastructure, IP may have to allocate longer time periods than the ones defined in the "Blue Zones".

In periods concerning the Blue Zones, the track sections to be subjected to restriction of use, are established according to the following rules:

- On single-track lines all traffic is prohibited during this period
- On double-track lines with one line closed, trains can operate on the remaining line during this period
- On multiple-track lines with one or more tracks being closed, traffic can continue on remaining lines.

The beginning of the interruption period is defined from the passage of the last train(s) not to be affected, with a maximum delay of 30 (thirty) minutes at the

start of the interruption period being permitted. The end of the interruption period is not affected by potential delays to its beginning.

The railway branches and parking spaces when electrically powered from a single section will be affected during the entire period for the section that feeds them.

For the purposes of drawing up the annual timetable, these restrictions should be considered along the following lines:

- a) While the annual timetable is being discussed, as long as the Blue Zones are guaranteed, IP will be flexible in altering these periods so as to minimize incompatibilities amongst applicant requests.
- b) b) IP will notify the final schedule of the Blue Zones when it delivers the annual timetable.

Although the Blue Zones are designed for track works, Applicants may make conditional path requests during these times.

These will be called "Conditional Paths" and may be used by IP whenever needed for works. IP will inform the Applicants that it needs to use the "Conditional Paths" in Blue Zones, every Monday of the week n-2, except in the case of emergency when it may not be possible to give such warning.

Until Monday of the week n-1, the applicants have the right to make suggestions regarding the way to reprogram or to cancel the affected trains. In case of no suggestion being presented, the trains will be cancelled.

If IP needs to use the "Conditioned Paths" under the terms given above, Applicants will have no right to compensation since this condition is assumed to have been accepted when a Blue Zone timetable request was presented, without loss for IP being able to demand a clear acceptance.

4.3.2 Deadlines and Information provided to Applicants

The reduction of capacity availability may result from track prohibition for execution of maintenance, renovation and modernization works, as well as from

(months)

speed restrictions, weight per axle, train length, traction or clearance. The temporary capacity restrictions may or not be planned.

The capacity restrictions may vary according to their duration and impact on railway traffic, with the various typologies being presented in the following table according to the conjugated combination of those two factors.

Temporary Capacity Restriction Typology	Period of consecutive days	Impact on traffic (channels cancelled, rescheduled or transferred to other means of transport)
Major impact TCR	More than 30 consecutive days	More than 50% of the estimated traffic volume on a railway line per day
High impact TCR	More than 7 consecutive days	More than 30% of the estimated traffic volume on a railway line per day
Medium impact TCR	7 consecutive days or less	More than 50% of the estimated traffic volume on a railway line per day
Minor impact TCR	Unspecified	More than 10% of the estimated traffic volume on a railway line per day

Each restriction typology creates, according to Attachment VII of Decree-Law no. 22015, a need for different actions inherent to their disclosure and consultation on part of the infrastructure manager to the known and potential applicants that are affected by the railway system capacity temporary restrictions, as exhibited in the following table:

	Impact	of TCR's		Timeline o

X is the effective date of the timetable

<u>Annex 4.3.2.A</u> presents a table with the main works on the infrastructure that are planned during the validity period of the present Network Statement (X-12), as well as with the main interventions of high and very high impact (X-24).

Considering the interventions provided for in <u>Annex 4.3.2.A</u> for X-12, <u>Annex 4.3.2 B</u> contains the supplementary time margins to be considered for preparation of the Timetable.

Potential critical situations that take place during the progression of the works contained in <u>Annex 4.3.2 A</u>, will be subject to a communication on part of IP with at least 4.5 months' notice.

IP may decide not to apply the stipulated deadlines if the capacity restriction is essential to resume safe rail operations, if the restriction schedule is beyond its control, if the enforcement of said deadlines proves cost inefficient or irresponsible in terms of live or infrastructure conditions, or if the applicants in question reach an agreement. In such cases and regarding any other capacity restrictions not subject to consultation, IP shall immediately consult the applicants and the main service facility operators in question.

IP shall communicate the confirmation of the need for intervention with a 42 days' notice.

4.4 IMPACTS OF FRAMEWORK AGREEMENTS

IP does not have framework agreements.

4.5 PATH ALLOCATION PROCESS

4.5.1 Annual Timetable Path Requests

The 2024 working timetable runs from 0h00 on 10 December 2023 to 24h00 on 14 December 2024.

The working timetable is produced on the following keys stages:

ENTITY	STAGE	DEADLINE
IP	Establishment of international paths 11 months prior to the implementation of the annual working timetable at the latest, IP ensures the definition of international train paths to be included in the annual working timetable in collaboration with other relevant allocation bodies, especially in terms of the Atlantic Corridor.	09-Jan-2023
Applicants	Delivery of train path requests Applicants must submit the corresponding applications to IP within 8 months before the implementation of the annual working timetable.	11-Apr-2023
IP	Preliminary annual timetable study and start of consultation process No later than 4 months after the closing date for the submission of tenders on the part of Applicants, IP draws up a annual working timetable project, marking the start of the Consultation process.	03-Jul-2023
Applicants	Conclusion of consultation process All stakeholders (all who have submitted requests for capacity, as well as those who wish to comment on the impact of the annual working timetable schedule in their ability to provide rail services during the term of the annual working timetable) may pronounce in writing within 30 days following the disclosure of the Working Timetable Project.	4-Aug-2023
IP	Delivery of annual working timetable plan to Applicants	03-Sep-2023
IP and Applicants	Annual working timetable comes into force	10-Dec-2023

RESTRICTIONS DUE TO STATION "ECLIPSES"

In accordance with the principles of efficient network management, IP can at certain times close stations which are not technically necessary for rail operation. These periods are commonly known as "eclipses".

Together with the delivery of the working timetable, IP presents an updated list of stations that are subject to "eclipses". This list can only be altered as part of an alteration to the Working Timetable, or an ad-hoc request accepted by IP under the terms of <u>section 4.5.3</u>. The Table of Eclipsed Stations can be found on the IP website through the eViriato application.

The obligation for IP to man any station that has been eclipsed only exists when the RUs request is soundly based.

4.5.2 Late Annual Timetable Path Requests

The requests or changes submitted after the end date for submission of requests to the Annual Technical Timetable are classified as late requests and will be included in the Technical annual timetable, although with a level of priority lower than the requests referred to in the previous chapter.

These requests for train paths may not entail changes to Paths already allocated, unless in case of consent on part of the Applicant to which those Paths were already granted.

For late requests, the following phases apply:

ENTITY	STAGE	TIME LIMIT
Applicants	Delivery of late requests From 8 months to 2 months prior to the entry into force of the Technical annual path, the Applicants may submit their requests to IP.	16-0ct-2023
IP	Delivery of annual working timetable project The IP's response to late requests will be given after all the requests submitted to the Technical annual path are replied, no later than 1 month from the entry into force of the Annual technical path.	13-Nov-2023
Applicants Answer to the annual working timetable project The interested parties (those which have submitted late capacity requests) must express their acceptance in writing, within 5 working days from the date of delivery of the respective proposal.		20-Nov-2023
IP and Applicants	Working timetable comes into force	10-Dec-2023

4.5.3 Requests during the duration of the Timetable (Ad-Hoc)

The requests received from 17 October 2023 until the final date of the final annual Technical Timetable will be studied by IP according to the classification described in the following paragraphs.

REQUESTS WITH SIGNIFICANT TIMETABLE IMPACT

Applicants are allowed to request alterations with significant impact on the working timetable to allow for unforeseen or uncontrollable situations during the original drawing up of the timetable.

Any significant timetable alteration or adjustment after winter will preferably occur at midnight on the last Saturday of June, although other dates can be agreed.

A "significant impact" to the timetable structure means a request or series of requests by an Applicant that directly or indirectly affects more than 100 cadenced train paths or 50 non-cadenced train paths within a 30-day period. An example of significant impact would be a path request beginning June 1st, that affects 30 non-cadenced paths and another request from the same Railway Undertaking affecting 30 non-cadenced paths from June 30th.

The principles of the capacity allocation process are the same as those applied to the working timetable, although some stages are omitted, and deadlines are shorter leading to an 80-day minimum period for the procedure.

These capacity allocation requests cannot require any alterations to those requests that have already been attributed (including those arising from other capacity allocation requests that occurred after the working timetable was set down), unless agreed to by the Applicant to whom these capacity allocations were attributed.

The following stages are for updating the working timetable, based on requests with significant timetable impact:

ENTITY	STAGE	TIME LIMIT*
Applicants	Delivery of train path requests	80 days
IP	Preliminary timetable study and start of hearing process	50 days
Applicants	Conclusion of hearing process	30 days
IP	Delivery of working timetable plan to Applicants	20 days
IP and Applicants	Working timetable comes into force	Day 0

* minimum days in advance of timetable coming into force

The delivery of train path requests in advance of these limits may lead to an agreement between IP and the Applicant regarding the other stages being brought backward.

REQUESTS WITH REDUCED TIMETABLE IMPACT

To deal with unforeseen and uncontrollable situations having reduced impact on the working timetable, Applicants can present new train path requests.

A "reduced timetable impact" means a request or series of requests by an Applicant that directly or indirectly affects a maximum of 100 cadenced train paths or 50 non-cadenced paths within a 30-day period. An example of reduced impact would be an Applicant requesting a series of paths from June 1st to June 30th, which does not affect more than 50 non-cadenced train paths or 100 cadenced paths.

The principles for the capacity allocation process are the same as for alterations with significant impact, but with a minimum of 30 days for the procedure.

These capacity allocation requests cannot require any alterations to those requests that have already been attributed (including those arising from other capacity allocation requests that occurred after the working timetable was set down), unless agreed to by the Applicant to whom these capacity allocations were attributed.

The following stages are for updating the working timetable, based on requests with reduced timetable impact:

ENTITY	STAGE	TIME LIMIT*
Applicants	Delivery of train path requests	30 days
IP	Preliminary timetable study and start of hearing process	20 days
Applicants	Conclusion of hearing process	12 days
IP	Delivery of working timetable plan to Applicants	7 days
IP and Applicants	Working timetable comes into force	Day 0

* minimum days in advance of timetable coming into force

The delivery of train path requests in advance of these limits may lead to an agreement between IP and the Applicant regarding the other stages being brought backward.

AD-HOC REQUESTS

IP will give its decision as to ad-hoc requests within a period of 5 working days.

The ad-hoc requests submitted within less than 5 working days before their date of entry into force might not be accepted by IP.

These capacity allocation requests cannot require any alterations to those requests that have already been attributed (including those arising from other capacity allocation requests that occurred after the working timetable was set down), unless agreed to by the Applicant to whom these capacity allocations were attributed.

4.5.4 Coordination Process

The Capacity Allocation Process mentioned in the present paragraph concerns the requests for train paths used with regard to the period of the annual Technical Schedule.

After receiving requests for train paths, IP processes the data on all requested paths, as well as restrictions imposed by management and maintenance of the infrastructure.

In the process of timetable modelling and evaluation, various incompatibilities regarding these requests can arise:

- Incompatibility with allocated train paths, including pre-planned train paths;
- Incompatibility with other train path requests;
- Incompatibility with infrastructure restrictions.

These can be firstly resolved through adjustments to timings of requested paths and as a last resort by the partial or total non-acceptance of the train path requests.

IP can also propose adjustments to the timetable structure based upon capacity optimization criteria that are subject to agreement by the applicants.

In these cases, IP begins a coordination process aimed at establishing a good cooperation between itself and all Applicants. The process aims to resolve and seek better adjustment among requests by maximizing the satisfaction of customers' needs through non-discriminatory and transparent principles. This process is administered by IP, which defines the timetable for meetings and prepares the necessary working documents.

In situations where incompatibilities remain, they will be resolved by IP based on the following factors presented in a hierarchical manner (except in the case of a congested infrastructure section, where specific rules apply):

- Services subject to public service obligations and services of greater importance to the community and of general economic interest, particularly international freight services
- Overall impact on the timetable structure
- Optimization of capacity utilization, namely in terms of quality
- Priority rules to be applied in congested areas (2nd and 3rd selection level)
- Number of identical paths used
- Date of request submission.

The coordination process comes to an end with the delivery of the preliminary annual working timetable to all Applicants, giving the start to the hearing. Interested parties, (all those who have presented path requests as well as those who wish to make observations about the working timetable impact in their capacity as rail service providers during the period in question) must give written notice within the defined deadlines.

Once the consultation process is over, IP publishes the final version of the Annual Timetable, without prejudice to the possible need for adjustments due to the presentation of complaints, in the terms of <u>section 4.5.5</u> of the Network Statement.

4.5.5 Dispute Resolution Process

After the final allocation of capacity by IP, Applicants may, within 5 working days, submit to IP a duly substantiated complaint concerning the allocated train paths.

IP may send a reasoned reply to the Applicant within 10 working days, either maintaining the allocation of the Timetable or accepting all or part of the requests submitted, in which latter case all other Applicants affected will be notified.

4.5.6 Requests concerning the Atlantic Corridor

Applicants are allowed to submit capacity requests to C-OSS pertaining to train paths crossing at least one border included in the Atlantic Corridor, and covering at least one Pre-Arranged Path (PAP).

The capacity allocation process for Pre-Arranged Paths and Capacity Reserve follow the general timetable below:

ENTITY	STAGE	DEADLINE*
C-OSS	Publication of international paths	09-Jan-2023
Applicants	Train path requests	11-Apr-2023
C-OSS	Report of the path supply project	03-Jul-2023
Applicants	Conclusion of consultation process	04-Aug-2023
C-OSS	Report of final answers	04-Sep-2023
Applicants	Publication of capacity reserve	09-Oct-2023
C-OSS	Late Path requests	16-0ct-2023
C-OSS and Applicants	Working timetable comes into force	10-Dec-2023

4.6 CONGESTED INFRASTRUCTURE

DEFINITION

If it remains impossible to properly satisfy requests for infrastructure capacity after the coordination process, IP will declare the part of the concerned network a "congested area" and notify the AMT of this.

CAPACITY ALLOCATION IN CONGESTED AREAS

Whenever there is a need to select paths and reject others, the choice is made by IP in accordance with the priority rules established in this document.

Even in congested areas, IP can reserve capacity in the definitive working timetable to respond to foreseeable ad-hoc requests.

PRIORITY RULES APPLYING IN CONGESTED AREAS

Whenever adjustments to train path requests on the basis of priorities are required, IP adopts a set of rules based on three selection levels.

Access to priority resulting from the selection criteria referred to does not confer an exclusive right, as IP can define a maximum percentage of available capacity to be allocated on each line and time period to each type of priority service. This limit can be imposed by IP if priority service requests overload the infrastructure capacity to the detriment of other requests.

1ST SELECTION LEVEL

The services subject to public service obligations and the services of a greater importance to the community and of a general economic interest, particularly the services for the transport of international goods, take a higher priority.

2ND SELECTION LEVEL

If 1st level selection criteria does not permit conclusion of the process, other factors apply based on degrees of priority according to service types and time periods.

The table below shows degrees of priority, being "1" the maximum value and "8" the lowest.

Where services use cadenced timetables, the priority allocated in rush-hour periods (06h00 to 10h00 and 16h30 to 20h45 on working days) is maintained outside of these periods, as long as the paths requested are part of the same timetable system.

DAYS	TIME	SUB1	SUB2	LC	OSP	МІ	MN	MV	OTHERS
Weekdays	00:00 06:00	5	6	2	4	1	3	7	8
	06:00 10:00	1	3	2	4	5	6	7	8
	10:00 16:30	5	6	1	2	3	4	7	8
	16:30 20:45	1	3	2	4	5	6	7	8
	20:45 24:00	5	6	1	2	3	4	7	8
Saturdays	00:00 06:00	5	6	2	4	1	3	7	8
	06:00 10:00	1	3	2	4	5	6	7	8
	10:00 14:00	5	6	1	2	3	4	7	8
	14:00 24:00	5	6	1	2	3	4	7	8
Sundays & Public Holidays	00:00 24:00	5	6	1	2	3	4	7	8

Where:

Sub1 – Suburban passenger services with a frequency equal or greater than six trains every hour during rush-hour periods

Sub2 - Suburban passenger services with a frequency lower than six trains every hour during rush-hour periods

LC – Regular high quality national inter-city services and international passenger services

OSP - Other medium to long-distance passenger services

MI- International freight or express services

MN- National freight services

MV – Empty train runs

Others – Other services such as rehearsal runs, crew training or contractors' trains.

3rd SELECTION LEVEL

If 2nd level criteria do not resolve the selection process, the following apply in decreasing order of priority:

- Requests which cause less relative network impact;
- Requests which use the highest number of identical paths;
- Requests which use the most train kilometres (TK) on the network.

4.7 EXCECIOPNAL TRANSPORT AND DANGEREOUS GOODS

Path requests for this type of transport must be made within at least 30 working days' notice because of the need to assess and resolve any incompatibilities by IP.

Without prejudice to other prescribed regulatory measures being applied, before a train carrying dangerous goods is dispatched, they shall not be allowed to commence their journey without the Railway Undertaking having given prior notice to IP of the routing plan and of the respective safety data sheet, written in Portuguese, detailed composition, and place in which the dangerous merchandise circulates.

Trains carrying dangerous goods should be given priority whenever their permanence in premises where it is not possible to ensure their safety could constitute a danger to people and property, according to the criteria stipulated in the RID.

They should not circulate with faster moving trains at their rear.

4.8 RULES AFTER PATH ALLOCATION

4.8.1 Rules for Path Modification by Applicants

A request for path modification submitted by the Applicant following the beginning of the annual Technical Schedule entails the formalization of a new request for capacity and the cancelation of a previous request, with application of the rules defined in the respective requests.

4.8.2 Path Alteration Rules Promoted by the Infrastructure Manager

The path alteration rules established and promoted by IP are described in <u>section 4.3</u> of the present Network Statement.

4.8.3 Non-Usage Rules

A path requested by an RU is not used, it will have to pay the penalty as described in <u>section 5.6.3</u> of this document.

4.8.4 Rules For Cancellation

Cancellation situations are covered by those applied to the non-usage capacity.

4.9 REDESIGN OF THE INTERNATIONAL TIMETABLING PROCESS (TTR)

RailNetEurope (RNE) and Forum Train Europe (FTE), supported by the European Rail Freight Association (ERFA) are developing a project called TTR

with the aim of harmonizing and improving the timetabling system and thus improving the competitiveness of rail.

TTR consists of better planning of the distribution of infrastructure capacity, including temporary capacity constraints, and the introduction of new capacity allocation processes.

The objective of TTR is to better serve market needs and lead to an optimal use of existing capacity. For passenger traffic it will mean earlier availability of ticket purchases. For freight traffic it will allow capacity to be requested at shorter notice and consequently greater flexibility in meeting market needs.

Detailed information on the project can be found on <u>ttr.rne.eu</u> and in <u>http://www.forumtraineurope.eu/services/ttr/</u>.

TTR is planned to be partially implemented for the timetable 2025 provided that it is supported by the European and national legal framework.

4.10 CAPACITY ALLOCATION PRINCIPLES FOR THE RFCS

The set of 11 Rail Freight Corridors have agreed on a common description of the Capacity Allocation Principles, which is provided in <u>Annex 4.10</u>.

SERVICES AND CHARGES

5.1 INTRODUCTION
5.2 CHARGING PRINCIPLES
5.3 MINIMUM ACCESS PACKAGE AND CHARGES
5.4 ADITIONAL SERVICES AND CHARGES
5.5 ANCILLARY SERVICES AND CHARGES
5.6 FINANCIAL PENALTIES AND INCENTIVES
5.7 PERFORMANCE SCHEME
5.8 CHANGES TO CHARGES
5.9 BILLING ARRANGEMENTS

5. SERVICES AND CHARGES

5.1 INTRODUCTION

The services described in this chapter are in accordance with Decree Law n.° 217/2015 in particular 13° article and Annex II.

5.2 CHARGING PRINCIPLES

IP sets the amount of charges in accordance with Decree-law 217/2015, particularly article 31 therein, as well as the Implementing Execution EU 2015/909 in the ascertaining of Direct Unit Cost.

Charges for using the Minimum Access Package correspond to the costs directly attributable to the operation of the rail service, as set in section 3 of article 31 of Decree-law 217/2015. In addition, the fees for use of the minimum access package also include the components provided for in article 32 and 33 of Decree-Law no. 217/2015.

Charges for access to service facilities do not surpass the cost of their provision, plus profit established on the basis of Portuguese market values, as set in section 11 of article 31 of Decree-law 217/2015.

Charges on additional and ancillary services meet requirements in section 12 of article 31 of Decree-law 217/2015.

The regulations governing the tariffs for minimum access package are given in <u>Annex 5.2</u>.

5.3 MINIMUM ACCESS PACKAGE AND CHARGES

The minimum access package contains:

- a) handling of requests for railway infrastructure capacity;
- b) the right to utilise capacity which is granted;

- c) The use of railway infrastructure, in particular railroad switchs and junctions;
- d) train control including signalling, regulation, dispatching and the communication and provision of information on train movement;
- e) use of electrical supply equipment for traction current, where available;
- f) all other information required to implement or operate the service for which capacity has been granted.

Charges for Minimum Access Package for pathways are calculated as follows:

$$TUI = \sum_{i=1}^{n} T_i \times CK_i$$

Where:

TUI – Charge for providing Minimum Access Package when using a train path for a rail composition.

i - Line in operation

Ti – Base charge defined in the Network Statement for each line, depending in the traction used, use of platforms, train schedule and market segment.

CKi – Distance actually covered by a rail composition in each line in operation.

The collection of the charge that are due for the Minimum Access Package takes into consideration all the capacity actually used by each Railway Undertaking in the period covered by the invoice.

The amount each Railway Undertaking must pay depends on the traction used, market segment, train schedule, train length and line demand. The total amount

is determined by the sum of the product of the length covered of each line by the applicable charge.

VAT will be added to these amounts.

The charges for the Minimum Access Package by train kilometres (CK), in force during the term of Timetable 2024, are those indicated in the table below:

		PASSENGERS															
SCHEDULES	LINES	URBAN		REGION	NAL	REGUL LONG DISTAN		HIGH QUALI1 LONG DISTAN		INTERNA	ATIONAL	SPECI	AL	FREIGH	r	ЕМРТҮ	RUNS

TARIFF FOR AD-HOC REQUESTS

Ad hoc requests are all capacity requests presented after the annual working timetable comes into force. These requests are subject to an additional fee that varies with the order formalization in advance, according to the table below:

ADHOC REQUEST CHARG	ADVANCE OF AD HOC CAPACITY REQUEST IN RELATION WITH THE TRAIN DATE
0,00 €/CK	Equal or higher than 14 days
0,04 €/CK	Between 14 days (exclusive) and 7 days (including)
0,08 €/CK	Between 7 days (exclusive) and 4 days (including)
0,15 €/CK	Less than 4 days

The day count is performed as follows:

- the requested train path day is not counted in the count of days;
- the day on which the Ad-hoc request for capacity is made is used in the count of days;
- The requested train path time does not interfere with the count of days.

VAT will be added to these values.

5.4 ADDITIONAL SERVICES AND CHARGES

The additional services to be provided by IP are expressly requested by the RUs. Although IP does not have to supply these services, if there are viable and comparable market alternatives, it is company policy to supply them indiscriminately whenever they are requested by an RU as long as there is available capacity.

5.4.1 Electrical energy for traction

IP transfers to the Railway Transport Companies the direct costs with the acquisition of electric power for traction, as well as the administrative services concerning the assessment of data and distribution of consumptions, according to the consumption distribution method defined in <u>Annex 5.4.1</u> of this Network Statement.

Electric power is available on the railway network through the substations identified in <u>Annex 2.3.9 B</u>.

Annex 5.4.1 shows the rules regarding this matter, including tariffs.

5.4.2 Services to Trains

IP doesn't provide these services.

5.4.3 Exceptional Transports and Dangerous Goods

In the case of exceptional transports (as defined in <u>section 3.4.3</u>), the previous execution of a feasibility study by IP is mandatory. This study will assess the feasibility of that transport, and the identification of implications and adaptations that have to be incorporated either in the operating infrastructure or in the rolling stock.

The feasibility study includes::

- Decision regarding the transport's feasibility;
- Identification of the need for infrastructure adaptations, including submission of budget and a preliminary plan for the execution of the works;
- Identification of the need of adaptations to rolling stock, which should be carried out by the Applicant.
- Identifying possible capacity restrictions.

The feasibility study is provided within a maximum period of 20 (twenty) working days starting on the date the Applicant formalized the request.

After sending the feasibility study, whenever the execution of any interventions in the infrastructure is identified, the following steps must be taken:

- a) The Applicant must request a detailed study
- b) IP shall carry out the detailed study, including final budget and planning, as well as the payment plan.
- c) Contract Signing by IP and the Applicant, defining the terms under which the transport will be carried out, including the infrastructure intervention plan and transport dates.

For the execution of this feasibility study a 500 \in fee is charged, plus value added tax. The amount charged for the feasibility study will not be reimbursed under any circumstances.

5.4.4 Shunting

The additional shunting services provision to the RUs transport companies will be carried out after the presentation of the corresponding requisitions (namely through the IT tool *eServiços*) and being conditioned to the available manpower capacity.

In stations where the services are available but there is no specific crew on site, the service time includes the travelling time from the nearest manned station.

Shunting is charged in terms of period duration according to the following table:

SHUNTING TYPE	DURATION	SHUNTING TYPE
Short duration	Up to 30 inclusive	5,95
Long duration	More than 30	26,87

The "actual minutes" take into account the time from when the resources started to be mobilised until they become available for other activities.

The fees presented take into account the average time necessary for performing the shunting and the IP corresponding workforce value, as per <u>Annex 5.4.4</u>.

VAT will be added to these values.

5.4.5 Parking of Rolling Stock

Parking must take place off the circulation lines used for the Minimum Access Package itineraries.

In exceptional cases where IP allows circulation tracks to be used for parking and while the lines are not reclassified, the rate will be the same as for parking.

Annex 2.3.3 lists the circulation lines in the railway stations.

Parking outside the circulation tracks in stations for periods of over 1 hour is charged according to the formula:

$$Te = 0,0291 \times M$$

Where:

Te – the tariff in Euros, for parking the rolling stock of each Railway Undertaking in a given line in a Station.

M – number of effective minutes of occupation of a line by parked rolling stock, by Railway Undertaking.

The technical stop situations foreseen in the timetable or in printed letter, even if for periods over 1 hour, are excluded from the scope of the application of this tariff.

When IP exceptionally permits the permanence in running lines, a tariff equivalent to the parking tariff applies.

Electricity and water consumptions are not included in the parking services tariff

The tariff calculation is based on the maintenance costs for the infrastructure used, in other words, the lines not used for circulation.

VAT will be added to these values.

5.5 ANCILLARY SERVICES AND CHARGES

Ancillary services to be provided by IP are expressly requested by the RUs, while IP is not obliged to provide them. Although IP is not obliged to provide these services, it is the company's policy to provide them in a nondiscriminatory manner whenever requested by any railway company, provided there is available capacity.

5.5.1 Access to Telecommunications Network

Alongside the voice communication services associated with traffic command and control (communications between command posts and train drivers), which are covered by the Minimum access package, IP may provide the following ancillary services:

- a) Voice communications relative to the RUs maintenance and management activities. This service enables the establishment of communications between operations and maintenance posts of the RU and the train drivers and crew. Communications may be established through dispatcher terminals, cab radios and portable terminals and closed communication groups may be created;
- b) SMS messaging service;
- c) GPRS/EDGE data transmission service;
- d) Other services in concessioned stations.

Infraestruturas de Portugal reserves the right to establish limits to the concession of these services in function of the network's available capacity and service prioritization criteria.

These fees will be applied as monthly flat rates, either individually or in clusters. Their cost will be determined individually, according to the number of services to hire the number of terminals, the average traffic for each terminal, the availability requirements, and the time to restore service.

5.5.2 Technical Inspection of Rolling Stock

IP doesn't provide these services.

5.5.3 Ticketing Services In Passenger Stations

IP doesn't provide these services.

5.5.4 Specialized Heavy Maintenance Services

IP doesn't provide these services.

5.5.5 Supply of Labour for Railway Undertaking Operational Activities

The provision of these ancillary services will be carried out after the presentation of the correspondent requests (namely through the IT tool eServiços), being conditioned to the manpower available capacity.

This service exclusively comprises the supply of labour for operational activities for which the Railway Companies are responsible.

These services are charged according to their nature and quantity of provisions:

NATURE OF THE SERVICE	TARIFF / PROVISION (€)
Water supply	8,42
Diesel supply	7,24
Commercial treatment of freights	9,50
Weighing	11,12
Other activities	16,41

Tariffs previously presented consider the average time required to operationalise each type of service and the value associated with the typology of labour most frequently applied according to <u>Annex 5.4.4</u>.

Infraestruturas de Portugal

VAT will be added to these values.

5.5.6 Support for The Circulation Authorisation Processes

IP can support the RUs in the circulation authorization processes for the rail network, which are issued by the IMT.

These services are charged according to human means used, taking into account the professional categories mentioned in <u>Annex 5.4.4</u>.

5.5.7 Feasibility Capacity Studies

IP can support the applicants in the analyses of diverse options for transport services, by studying theoretical train paths. These studies may or not lead to subsequent capacity requests by the applicants.

If these services do not lead to requests for capacity, they are charged according to human means used, taking into account the professional categories mentioned in <u>Annex 5.4.4</u>.

5.6 FINANCIAL PENALTIES AND INCENTIVES

5.6.1 Penalties for Path Modification

In the event of modification of the train path already allocated, by decision of the Applicant, IP will apply the tariffs associated to the Ad-Hoc requests for capacity.

5.6.2 Penalties for Path Alteration

In case of a change of the train path already allocated by IP, an alternative solution will be prioritised equivalent to that initially allocated to be carried out jointly with the Applicant, in which case no right to compensation shall exist.

Following the beginning of the annual Technical Schedule, in situations of cancellation of train paths on account of the realization of works in the infrastructure and in which IP fails to meet the notification deadline on Monday of week n-2 for works in "blue areas", or in cases in which IP uses periods outside the "blue areas", the Applicants are entitled to a financial compensation for the costs associated with alternative transports, in the following terms and conditions:

- a) In case of use of alternative road services, IP will offer compensation for the procurement costs incurred in Portuguese territory.
- b) In case additional railway kilometres are required to enable the alternative transport service set, IP will not charge the usage fee and will cover the cost of energy used in the Portuguese territory.
- c) In case of changes to train routes, IP will cover the usage fee differential and the energy consumption differential in the Portuguese territory.
- d) The Applicant is responsible for justifying the above-mentioned costs, which will be verified by IP, and can be the object of further clarification or revise, without which IP will not accept to cover them.
- e) Where interventions require alternative transport services with a higher impact on the clients, IP will examine the possibility of associating itself with the Applicant in joint public information campaigns.

Any other additional costs incurred by the Railway Undertakings (particularly public information campaigns carried out on their own initiative or expenses with staff) and lost profits are not eligible.

5.6.3 Penalties for Non-usage

The amount due for unused capacity requested depends on the timeliness with which said cancellation is communicated, and is calculated as a percentage of the amount of the capacity requested, according to the table below:

PERCENTAGE OF
THE APPLICABLE
CHARGE VALUEADVANCE CANCELLATION REQUEST
REGARDING THE DATE OF THE TRAIN5 %Equal or higher than 14 days

10 %	Between 14 days (exclusive) and 7 days (including)
50 %	Less than 4 days

Days are counted as follows:

- the day on which the path is requested does not count;
- the day on which the cancellation is requested counts;
- the hour of the requested path does not matter dias.

No amounts shall be due for unused capacity requested if the cancellation is communicated before the start of the technical schedule.

In case of partial suppression, only the unused itinerary shall be counted.

Charging for unused capacity requested, for each suppressed path, on the Railway Undertaking responsibility, has a maximum time period of 30 days from the first day of suppression.

VAT will be added to these values.

5.6.4 Penalties for Path Cancellation

Cancellation situations are already covered by the valuation of requested and unused capacity.

5.6.5 Incentives/Discounts

IP applies no incentive schemes beyond those contemplated in the Minimum Access Package.

5.7 PERFORMANCE SCHEME

5.7.1 General Principles and Objectives

The performance regime (PR) aims at reducing disturbances to a minimum and to promote efficiency in the services, allowing for a better operating performance, in line with the standards foreseen in the allocation of capacity.

PR consists of an instrument regulated with the purpose of minimising the constraints to railway running through a mechanism of financial incentives, in the form of bonus and malus.

5.7.2 Performance Monitoring

The Operational Command Centres (OCC) record all delays based on a list of cause/responsible pairs provided for in Annex VI of Decree-Law 217/2015.

The recording system also contains the following elements:

- a) date;
- b) train number;
- c) monitoring point where measurement is made;
- d) moment of passage of train at monitoring point;
- e) the quantification of the deviation potentially observed;
- f) reason for the delay, in case of delay;
- g) the imputation of liability for the delay to the various parties involved, in case of delay.

For PR purposes, the following control points (monitoring points associated with the formula for calculating the PR) are allocated:

- a) Origin of train with time at origin criterion;
- b) Destination of train with time at destination criterion.

The Railway Undertakings may choose other additional control points within the universe of monitoring points provided by IP.

The regular performance standards (delay value up to which the train is not accounted for PR purposes) for each control point chosen are:

- Passenger trains: 5 minutes;
- Freight trains: 30 minutes.

With freight trains, the delays at the trains' formation points which result in liability imputed to the owning Railway Undertaking are not valued.

MONITORING CONTRADICTORY PROCEDURE

The traffic monitoring process provides for a contradictory procedure which grants to all parties the right to give preliminary comments regarding the allocation of causes for delay, the responsibility and delay times which are registered into the system.

The identification and allocation of delays are carried out as follows:

- a) IP sends to the Railway Undertakings, by the 2nd working day following the operating day, a daily document with identifying of delays (TIAD). In case there is a holiday close to the weekend, the time period for submission of TIAD will end on the 3rd working day following the operating day;
- b) Railway Undertakings may submit, until the 2nd working day following the receipt, a founded challenge to the TIAD data;
- c) IP assesses the challenges and ascertains the Railway Undertaking's responsibilities for the delays, notifying the interest parties within 1 working day;
- d) In case of disagreement over the values and reasons behind the delays or their imputation, the Railway Undertakings may file a complaint within 4 working days;
- e) an arbitration mechanism (ARMED) will decide, within 10 working days, confirming the TIAD or determining that it be amended by IP.

IMPUTATION

The imputation of liabilities is supported by the "Monitorização de Desempenho" computer app, available online, which grants to the RUs, on a daily basis, access to the recording elements and enables them to insert their expressing of disagreement regarding the allocation of the reasons for delays and corresponding liabilities.

Where:

Delay_{i,pm} corresponds to the delay allocated to Company i at the pm Monitoring Point;

Delay_{pm} corresponds to the absolute delay value at the pm Monitoring Point;

Delay_{pma} corresponds to the absolute delay value at the Monitoring Point preceding the pm Monitoring Point;

Delay_{i,pma} corresponds to the delay allocated to Company i at the Monitoring Point preceding the pm Monitoring Point.

Delay increment_{i,pm} corresponds to the added delay occurred at the pm Monitoring Point on account of the Company's liability.

The delay values to be allocated to each of the parties involved (IP and Railway Undertakings) will correspond to the share of liability of each one, multiplied by the Control Point Weight. In situations of advance, the delay value is always zero.

These values may be adjusted by decision of the CORMED.

5.7.3 Financial Model

PROCESSING OF CREDITS AND DEBITS OF THE SYSTEM

For each of the companies involved in the PR, the annual value of incentive in the form of premium or penalty is calculated based on the following formula:

$$Icentive(\textcircled{e}) = \sum_{i=1}^{3} \left(Oi - Di \times \frac{Ck(year_0)}{Ck(year_A)} \right) \times FVi \times (1 - PR)$$

Where:

Incentive (\in) - Amount payable or receivable by each company at the end of the year.

- Sum of the delays caused in each market segment i (Freight, Medium/Long Distance and Suburban);

Oi – Objective: Limit value of delays at which point premia are converted into penalties. This parameter, variable according to each company, is calculated based on the number of minutes of delay caused to the company's liability system regarding the best of the last 3 years, unless otherwise defined by the CORMED committee. The best year is that with a lesser global financial impact (minutes of delay multiplied by the cost of each minute for each market segment);

Di – Weighted Delays: Number of minutes of delay that the company caused to the system during the year per market segment i;

ck (Year0) - Number of trains. Kilometre carried out by the company in the year concerning the Objective;

ck (YearA) - Number of trains. Kilometre carried out by the company in the year being assessed;

FVi: - Financial value to be allocated per minute of delay for each market segment i (€/min);

PR: - Average of the Punctuality Index of the company in the latest three years and of the year being assessed.

The reference values to be considered for purposes of valuation of delays in 2024 are:

- 11,50 € para Comboios suburbanos de passageiros;
- 7,00 € para Comboios de médio e longo curso de passageiros;
- 0,60 € para Comboios de mercadorias.

FINANCIAL CEILING AND GRADUAL APPLICATION OF THE PR

The annual value of (positive or negative) incentives to be allocated to each company is limited to 2% of the Minimum Access Package billing.

As regards IP, the referred to invoicing value corresponds to the sum of all RUs financially covered by PR.

NEW RUs

The new RUs which start operating in the network must complete a full yearlong record of activities. During that period, PR will have no financial effect on the company in question.

BILLING MECHANISM

The annual billing process of PR encompasses the following steps:

- 1. The process starts with the annual ascertainment of financial balances attributable to each of the companies, published in the Annual Report;
- In case of companies with a negative annual balance, IP will issue a debit note with the value of the balance of the year in question, deducted to the amount in question from possible values owed to the company;
- 3. In case of companies with a positive annual balance, they issue a debit note to IP with the value of the balance of the year, according to the availability of the PR Fund. In case there is no availability of the PR Fund, a credit corresponding to the missing amount is recorded regarding the company;

- 4. The allocation of amounts according to the availability of the PR Fund is carried out based on the sum of the positive balances of the year plus the credits awarded in previous years, the distribution subsequently being carried out proportionately to all the credits summed;
- 5. The PR Fund is created and managed by IP by way of an account exclusively used for the PR;
- 6. All values relating to the Performance Scheme are not subject to VAT.

PR REPORT

IP will submit the following reports:

- 1. On a monthly basis (until the last working day of the following month), information concerning delayed running and respective financial accounting;
- 2. On a quarterly basis (until the last working day of the month following the close of quarter), a performance report containing highly detailed analyses on the reasons behind the delay;
- 3. On an annual basis (until the last working day of January of the following year), a final report containing:
 - a. a summary of the interim reports;
 - b. final figures to be billed;
 - c. remaining amount in the PR Fund;
 - d. recommendations on improving performance (in coordination with CORMED).

5.7.4 Governance and Dispute Resolution System

The purpose of the PR Committee (CORMED) is the follow-up and development of the Performance Improvement System. CORMED's mission is to:

1. Define the macro-conception of the PR, so as to ensure the fulfilment of DL 217/2015 and the alignment with similar European systems, with emphasis on the Atlantic Corridor;

- 2. Determine, on an annual basis, the variable parameters of the PR, namely the financial value of the delays, the financial ceiling, the levels of delays or the establishment of objectives;
- 3. Define the communication channels between IP and the Railway Undertakings (who sends and who receives each type of information);
- 4. Decide regarding the operation of CORMED itself;
- 5. Define the constitution and operation of Arbitration (ARMED), whose purpose is the settlement of disputes in monitoring;
- 6. Define the rules for communication dissemination;
- 7. Suggest performance improvement measures that might require a commitment on part of each company and subsequently assess their implementation and their effects on the improvement of performance.

CORMED is composed as follows:

- 1. Infrastructure Manager (IP) it must promote the formation of consensus by way of a negotiating approach that respects the position of the Railway Undertakings;
- 2. Railway Undertakings they have the right to be informed in advance of all initiatives and to propose measures that are to be assessed by CORMED;
- 3. Regulator (AMT) an observer with the power to obtain all clarifications requested.

CORMED holds at least the following meetings:

- 1. In March of year N for an assessment of the period of year N-1;
- 2. In July of year N for a decision on the changes that must be contained in the Network Statement N+2.

The mission of the Performance Monitoring Arbitration (Arbitragem da Monitorização de Desempenho - ARMED) is to decide, in due course (maximum 10 working days), on the disputes of the monitoring contradictory procedure. ARMED shall develop efficient decision criteria in recurring cases.

CORMED is responsible for the constitution and operation of ARMED.

5.8 CHANGES TO CHARGES

The evolution of the tariffs to be published in the Network Statement is subject to the appreciation and validation of AMT.

5.9 BILLING ARRANGEMENTS

The amounts for the Minimum Access Package services are monthly charged based on the tariffs published in the Network Statement and the train kilometres used according to the data registered by the IP traffic management.

The amounts corresponding to services in services facilities, additional and ancillary services are charged in accordance with the tariffs published in the Network Statement or the Contracts or Protocols drawn up.

All invoices must be paid within 30 days of their issue.

In case of failure to pay the invoices, IP will apply late payment interest, calculated at the legal rate in force as at the date of non-compliance with the payment of invoices, according to the time limit previously defined.

The Railway Undertaking may, within 20 days from the date of issue of the invoice, submit to IP a substantiated and detailed complaint concerning a section or sections of the invoice, in which case IP has 30 days to justifiably revise or keep the invoice presented. The complaint has postponing effects on the payment deadline.

OPERATIONS

6.1 INTRODUCTION6.2 OPERATIONAL RULES6.3 OPERATIONAL MEASURES6.4 TOOLS FOR TRAIN INFORMATION AND MONITORING OF TRAINS

6. OPERATIONS

6.1 INTRODUCTION

The RUs are obliged to comply with the Railway Safety Technical Regulations, which correspond to the set of normative documents used in railway operation, and whose application and fulfilment supports and guarantees the safety of traffic in the national railway network.

Instruction of IMT, I.P. 1/2015 concerning Railway Safety Technical Standards, contained in Annex I to the referred to Instruction, remains under the management of referred Institute.

The regulatory documents contained in the referred Annex I which still remain in force may be provided by way of a request duly identified and sent to the Documentation Centre of IMT to the email address biblioteca@imt-ip.pt.

The documents contained in Annex II, Section I – Rules, Procedures and Instructions under the Management of the Infrastructure Manager - may be request at ped-ext-reg@infraestruturasdeportugal.pt.

6.2 OPERATIONAL RULES

The regulatory documents concerning Railway Traffic Management (operation) are divided into three separate categories:

- European Union Normative System
 - The EU normative system concerning Railway Traffic Management is contained in Implementing Regulation (EU) 2019/773 of the Commission of 16 May 2019 on the Technical Specification for Interoperability (TSI) regarding the "traffic operation and management" subsystem and the respective Application Guides.
- National Normative System
 - The national normative system concerning Railway Traffic Management is divided into two subcategories:
 - National Legislation (a mention of the most relevant Decrees-Laws);
 - IMT Regulation.

- Normative System of the Infrastructure Manager
 - The normative system of the Infrastructure Manager concerning Railway Traffic Management is divided into two subcategories:
 - Regulations of the Infrastructure Manager;
 - Operation supporting documents.

RUs may also be subject to obligations arising from other relevant national or international legislation that might not be mentioned in <u>Annex 1.3</u>.

6.3 OPERATIONAL MEASURES

6.3.1 Principles

IP is governed by the principles contained in the Railway Safety Technical Regulations with regard to traffic management activities.

6.3.2 Operation Regulation

The "operational" language of IP is Portuguese, and it is in such language that IP draws up and distributes among the RUs all the documents regarding traffic operation and management. In case the RUs do not adopt the same "operational" language as the one of the information initially provided, it is up to the Railway Company to obtain the necessary translations or provide explanatory notes in another language.

For management of all operational processes related to railway operations and traffic management, the Railway Safety Technical Regulations (and other supplementary standards) provide the basis that enables IP to ensure the management of the infrastructure capacity as well as of the command and control of railway traffic.

All this set of regulations is listed and updated on a weekly basis through the release of a "Index of the regulatory texts in force" (a comprehensive listing of all the standards), which ensures that the information on the standards to be complied with at any given moment is correct. This index is sent to all players of the railway system (IM and RUs operating in NRN), including IMT and GPIAAF (Gabinete de Prevenção e Investigação de Acidentes com Aeronaves

e de Acidentes Ferroviários - Agency for the Prevention and Investigation of Accidents with Aircraft and Railway Accidents).

As regards cross-border operations, they are regulated between IP and ADIF, with recourse to the provisions of IET 4, ICET 104 e ICET 204.

6.3.3 Disturbances

In case of disturbance of railway traffic because of technical failure or accident, IP, in compliance with Article 54 "Special measures in case of disruption" of Decree-Law 217/2015, takes all necessary measures in order to restore the normal situation, activating all contingency plans in force, and informing all the relevant public entities in case of serious incidents or aggravated disturbance of the railway traffic.

FORESEEN PROBLEMS

To resolve problems that permit scheduling of response measures, IP will inform RUs of the impacts involved with the maximum possible advance notice.

IP will supply the following information to RUs as soon as possible:

- Train paths affected by the undertaking of track works
- Start and finish date of track works
- Predictable restrictions to rail traffic caused by track works
- Expected increase in route timings due to temporary speed restrictions
- The need to cancel train paths and the availability of alternatives.

RUs are allowed to reject alternative train paths indicated by IP and in these cases the paths concerned are cancelled.

IP will always try to minimize the operational impacts using, whenever possible, periods that are less detrimental to RUs.

UNFORESEEN PROBLEMS

In the case of disturbances to rail traffic due to accidents or technical failures, IP will take all necessary measures to re-establish all normal operating conditions.

In the case of emergencies and technical failures that render the infrastructure temporarily unusable, allocated train paths can be cancelled without notice during the period needed to repair the system.

If the track is blocked by rolling stock, IP will assume the role of coordinating the activities and the necessary resources to clear the blockage.

IP may demand any RU to place at its disposal the resources needed to rapidly resolve the situation even if the RU is not the direct cause of the obstruction. The RUs that put these resources at IP's disposal to resolve obstructions caused by third parties have the right to be compensated to the amount agreed upon with the entity that caused the obstruction in the first place, and which will have to bear the costs.

6.4 TOOLS FOR TRAIN INFORMATION AND MONITORING OF TRAINS

TIS is the application that enables to easily view, via Internet and in real time, the international freight trains along their itinerary.

All relevant data, as well as all information regarding the various Infrastructure Managers, belonging to an international train from its point of departure to its final destination, is obtained through the IP system, thus enabling a train to be monitored.

RUs and Terminal operators may also have access to TIS and may integrate the Advisory Board of RNE TIS. All members of this Board shall have access to all TIS data of their trains; any other requires agreements to be made.

The access to the TIS is free of charge and may be requested via RNE TIS Support.

More information can be found on: <u>https://tis.rne.eu</u>.

SERVICE FACILITIES

7.1 INTRODUCTION7.2 SERVICE FACILITIES OVERVIEW7.3 SERVICE FACILITIES MANAGED BY IP

INFRAESTRUTURAS DE PORTUGAL · 2024 NETWORK STATEMENT · page 60

7. SERVICE FACILITIES

7.1 INTRODUCTION

The Service Facilities described in this chapter and managed by IP concern the provisions of Decree-Law 217/2015, particularly its articles 13 and 27 and its Annex IV.

Following the publication of Commission Implementing Regulation (EU) 2017/2177 of 22 November 2017 on access to service facilities and rail-related services, service facilities are obliged to provide the information identified in said regulation.

To comply with Implementing Regulation (EU) 2017/2177, RailNetEurope (RNE) developed a common template meant as a reference for managing entities of service facilities to collect and organise the compulsory information stipulated by the aforementioned regulation. The template insures full compliance with regulation requirements, allowing service facility managers to provide an efficient response in the form of a Service Facility Information Document (SFID). This template can be accessed on: <u>http://rne.eu/wp-content/uploads/Common_template_for_service_facility_information_clean.pdf</u>

The content of the template is reproduced in <u>Annex 7.1</u>, although its adoption is not compulsory and service facility managers can develop their own solution to compile and organisation the necessary information according to the regulation.

Complementarily, the service facilitates' managers must provide IP with a set of basic information that covers the designation, location, contacts or availability of the Service Facility Information Document. For a greater efficiency in managing this process, IP is finalising an application to be made available on its website which will enable the validation of the service facilitates by the interlocutors and the subsequent direct updating of the information for which they are in charge of. In addition, service facility managers have the "Rail Facilities Portal" available for publishing information about their service facilities (the portal can be found at: <u>https://railfacilitiesportal.eu/</u>.

7.2 SERVICE FACILITIES OVERVIEW

<u>Annex 7.2.A</u> and <u>Annex 7.2.B</u> include identification of existing maintenance facilities in the Portuguese rail network, with indication of their location and managing entity.

7.3 SERVICE FACILITIES MANAGED BY IP

7.3.1 Common Provisions

IP does not have general provisions applicable to its facilities.

7.3.2 Passenger Stations

7.3.2.1 General Information

IP manages all stations and halts of the National Railway Network.

<u>Annex 2.3.3</u> provides information on the characteristics of the stations and halts.

7.3.2.2 Services

According to paragraph 2 of Annex II to the Decree-Law 217/2015, IP offers the following services in passenger stations:

- a) Use of Train Stations and Halts;
- b) Availability of Operational Facilities in Stations Complex;
- c) Consumptions of the Railway Undertaking's Equipment in Stations' Common Areas;
- d) Provision of Commercial Information.

a) Use of Train Stations and Halts

This service, provided in stations and halts, encompasses, among others, the use of areas assigned to waiting rooms, the viewing of travel-related information and the areas where the technical equipment is installed.

<u>Annex 7.3.2 A</u> shows the stations, halts and their classification. This Annex also shows the occupied operational facilities.

b) Operational facilities provision at stations complex

This service covers the provision of facilitates to the Railway Undertakings within the set of buildings of the passenger stations' compound that the latter might exclusively take for purposes of:

- Ticket selling rooms;
- Customer service offices;
- Support areas for operational staff.

These facilities are available to the Railway Undertakings without any furniture or equipments.

IP obliges itself to keep the surroundings of the facilities that may be occupied in a good state of maintenance, promptly repairing the deteriorations or malfunctions that may occur, namely in what concerns the operation of infrastructure networks.

RAILWAY UNDERTAKINGS OBLIGATIONS

Constitute RU obligations:

- a) The respect for the access and use rules of the facility which are notified by IP.
- b) The costs with the installation and use of telecommunication, water and electricity consumption are the sole responsibility of the RU, except when there is a sharing of the supplies of water and electricity between the RU and IP in which case IP sets the burden sharing.
- c) Allow IP's access, or its nominees, to the facilities for inspection purposes.

- d) To keep the facility in a good state of maintenance and conservation, and the promptly reparation of the occurring deterioration or malfunctions, at their own expenses.
- e) Supporting the costs with the carrying out of improvements, repair, renovation and adaptation works, as well as the respective projects which must be previously approved by IP. The interventions to these areas require the IP's prior authorisation, and the Railway Undertaking must submit the processes for change/remodelling for the IP's analysis and opinion. The works will be supervised by IP during their execution in the manner it sees fit. These works or improvements carried out by the Railway Undertaking, at the occupied facility, might enter the public domain, free of charge, as they are executed, with the Railway Undertaking not being entitled to any compensation or right of retention;
- f) Deliver, at the end of the occupation, the facility in a good state of conservation, without prejudice to the deteriorations resulting from a normal use and vacating within the period indicated by IP.
- g) The RU is responsible for all expenses, namely licenses, contributions, taxes and fines which fall upon the exercise of the RU activity in the occupied space, even if they are charged to IP, as well as any other expense connected to its operation.
- h) Assuming the responsibility for the cleaning and security services of occupied areas.
- i) Perform and maintain valid multi-risk and civil liability insurance policies concerning the occupied facilities and deliver a copy of it to IP.

CONTRACTS SIGNING

The facilities occupation will be governed by a contract to be established between IP and the RU, in which the Network Statement principles will be complemented, with a particular emphasis on the occupation duration. These contracts can be established at any time.

TEMPORARY REGIME APPLICABLE TO THE OCCUPATIONS WITH PENDING CONTRACTS

In the cases where a contract is not yet established, corresponding to old occupations, the provisions of the Network Statement continue to fully apply,

including payment obligations. In these exceptional situations, the following procedure applies provisionally:

ENTITY	PHASE	DEADLINE *
Railway Undertakings	Occupation's written request of (the ongoing) occupation	120 days
IP	Written communication on the (ongoing) occupation's acceptance or rejection	90 days

* Counted at least before the date of entry into force of the technical schedule

In situations where IP decides to reject the facilities occupation's requisition, as referred above, the RU have no right to any compensation.

Whenever there is a serious breach of the obligations of the Railway Undertaking, IP may at any time proceed in order to vacate the facilities.

c) Consumptions of the Railway Undertaking's Equipment in Stations' Common Areas

IP may also permit the installation of equipment of support to the Railway Undertaking's business activity in the stations' common areas, namely:

- Ticket vending machines;
- Access control equipments;
- Information equipments.

Railway Undertakings shall require by written form an authorization to the installation of these equipments, mentioning their characteristics and desired location.

The installation is dependent upon IP authorization, which will establish the applicable conditions.

The Railway Undertaking will be held liable for costs associated with the consumption of the installed equipment.

d) Provision of Supplementary Information

Upon Railway Undertakings request, IP can provide commercial character information to the passengers, in particular:

- a) Information on the existence of on-board bar service;
- b) Information on the acceptance of certain types of transport tickets;
- c) Special information about certain events;
- d) Detailed information about intermediate stops;
- e) Information about connections and links with other means of transport.

These informations maybe disseminated throughout tele-indicator messages, automated voice-announcements or live speech.

Annex 7.3.2 D shows the places where IP is able to provide this service.

The provision of this service will be carried out following the submission of the corresponding requisition (namely through the eServiços app), subject to the available capacity.

Each request will be valid for no more than 30 (thirty) days, following the first dissemination.

7.3.2.3 Description of Passenger Stations

The service facility defined in Network Statement as passenger station corresponds exclusively to the areas assigned to the infrastructure management public service.

These service facilities are classified according to 4 levels – A, B, C and D. Such classification, which is similarly applicable to the charging of use of stations and stops and of Provision of Operational Facilities in the Stations' Compound, relies on the following criteria and respective weightings:

- C1 Passenger Flow, related to the volume of passengers arriving at and departing from the station
- C2 Railway Service Rendered, associated with the diversity of railway services provided;

- C3 Intermodality Level, as a measure of availability and conditions of transportation means complementary to the railway service;
- C4 Relevance, through criteria associated with the coverage and reach of the station.

7.3.2.4 Tariffs

a) Use of passenger stations

The use of stations is charged according to the commercial stops made by each train, according to the typology of station where the commercial stop occurs:

STATION/HALT TYPE	TARIFF / COMMERCIAL STOP (€)
A	0,79
В	0,57
С	0,27
D*	0,06*

* In case of being an Halt type D, no tariff will be applied

VAT will be added to these values.

b) Operational facilities provision at stations complex

The operational facilities provision in each station complex is charged accordingly to the occupied areas in line with the station typology, regardless the occupation type.

STATION/HALT TYPE	MONTHLY TARIFFS / M2 (€)
A	2,30
В	1,68
C	0,93
D	0,25

- VAT will be added to these values.
 - c) c) Railway Undertakings equipment consumptions in common areas within the stations

The charges applicable are calculated on the consumption for each Railway Undertakings equipment installed in common areas of the service facilities.

d) Commercial character information provision

TELE-INDICATOR MESSAGES

The services provision corresponds to 20 minutes for the insertion in the system + 20 minutes for its removal, which totals 40 minutes for each requested operation, for a specific train and period, which will be charged accordingly to the manpower value of an Infrastructure Command Operator.

The applied tariff to each request of service provision is $24,45 \in$, to which applies the VAT. Request means all and any request which implies the introduction of a new message, even if an equal content but in a different idiom or an alteration of existing messages in the system.

The entry in force of the new annual technical timetable implies the formalization of new requests which will be the subject to billing.

Each request will be valid for no more than 30 (thirty) days, following the first dissemination.

VOICE ANNOUNCEMENTS

The services provision corresponds to 90 seconds, by announcement/message, which will be charged accordingly to the manpower value of a Infrastructure Command Operator.

The applied tariff to each request of announcement service provision is $0.92 \in$, to which applies the VAT.

The entry into force of the new annual technical timetable implies the formalization of new requests which will be subject to billing.

Each request will be valid for no more than 30 (thirty) days, following the first dissemination.

7.3.2.5 Access Conditions

The right of access to these facilities is limited to RUs.

7.3.2.6 Path Allocation

The requests for services submitted by RUs shall be responded in a non-discriminatory manner.

7.3.3 Freight Terminals

IP ensures the management of the freight railway terminals of Bobadela and Leixões, where a set of services enabling the modal transfer between Rail and Road of goods packaged in Intermodal Transport Units is provided.

The services provided in these terminals are listed in the Service Facility Information Document for the Freight Railway Terminals of Bobadela and Leixões at <u>https://servicos.infraestruturasdeportugal.pt/pt-</u> pt/parceiros/operacao-ferroviaria/os-nossos-servicos/terminais-demercadorias-ips .

7.3.4 Marshalling yards and train formation facilities, including shunting facilities

IP does not have any station exclusively aimed at marshalling or train formation, including shunting facilities.

7.3.5 Storage Sidings

IP has no service facility exclusively intended for storage sidings.

7.3.6 Maintenance Facilities

IP has no facility intended for rolling stock maintenance.

7.3.7 Other technical facilities, including cleaning and washing facilities

7.3.7.1 Turntables and Water Supply

7.3.7.1.1 General Information

The goal of these IP facilities is to establish the necessary and sufficient conditions for the seasonal operation of the historical train in the Douro Line.

7.3.7.1.2 Services

IP provides Turntables at the Régua and Tua stations and Water Supply equipment at the Régua, Tua and Pinhão stations for operation of the Historical Steam Train in the Douro Line.

7.3.7.1.3 Description Turntables and Water Supply

The details of the operational activities associated with this service constitutes an integral part of the regulatory documents, Regula Station Table – Paragraph 6.4 of Part 5 of Annex 3 to IS 2 and Tua Station Turntable – Point 7 of Part 3 of Annex 4 to IS 2, which specify the tasks and procedures related to their use.

7.3.7.1.4 Tariffs

The unit value for utilization of the historical train specific equipment is $35,75 \in$ per train, plus tax added value.

The water consumption of the flood discharge equipment is paid by the RUs and shall be subject to specific collection.

7.3.7.1.5 Access Conditions

The right of access is limited to RUs.

7.3.7.1.6 Path Allocation

The provision of this service to the RUs shall take place following the submission of the corresponding requisitions (namely through the eServiços application).

7.3.8 Maritime and inland port facilities

IP has no sea or river port facility.

7.3.9 Provision of Rail Relief

7.3.9.1 General Information

Under the terms of article 54 of Decree-Law 217/2015, in the event of disturbances to railway circulation resulting from technical failures or accidents, IP will take all necessary measures to ensure the re-establishment of the normal situation.

7.3.9.2 Services

To the railway relief provision in case of traffic disruption resulting from a technical failure or accident, accordingly to the terms provided on article 54. ^o of the Decree Law 217/2015, IP will take all the necessary measures and will provide the necessary means to restore the normal situation, and for this purpose may use the following resources, as defined in IET 96 – General Emergency Plan and in particular in ICET 296 – Specific Emergency Procedures quantified in its Annex 1 – Rail Relief:

- a) Rail or road means of assistance which IP ensures under contingency and promptness conditions;
- b) Adequate means of Railway Undertakings which allow a major efficiency at restoring the normal situation.

IP RAIL OR ROAD MEANS OF ASSISTANCE

IP ensures the provision of means of relief under the contingency and readiness regime.

The mobilisation and operationalisation of these means entail activities of a variable nature which are not encompassed by the contingency and readiness regime, wherefore the respective costs will be allocated to the entity(ies) responsible for the technical fault or accident, after liability is established.

RAILWAY UNDERTAKINGS MEANS

Whenever IP demands to a Railway Undertaking the adequate resources to restore the normal situation, this will be financially compensated, apart from allocating responsibilities. In this case the incurred costs have to be justified by the Railway Undertaking in detail.

7.3.9.3 Description of Railway Rescue Service Facility

The means of railway rescue are described in Annex 1 to ICET 296.

7.3.9.4 Tariffs

The value applicable to the deployment and operationalisation of relief means which are not covered by the Minimum Access Package depends on variable activities whose amount can only be set after the conclusion of the incident.

These variable costs are related to the mobilization and use of IP's intervention support and to the infrastructure usage for which the prescribed applicable charge corresponds to the Empty Runs value according to the table of <u>section</u> 5.3.

In case the provision of railway rescue service is ensured by a Railway Company, the costs incurred with the rescue operation and the utilisation of the infrastructure, to which the Running tariff in each section travelled applies, shall be allocated to the entity(ies) responsible for the technical failure or accident, after establishing accountability.

7.3.9.5 Access Conditions

The right of access is limited to RUs.

7.3.9.6 Path Allocation

IP ensures that the means of rescue are provided promptly and in a nondiscriminatory manner.

7.3.10 Refuelling Facilities

IP has no station exclusively intended for refuelling.

ANNEXES

ANNEX 1.3 Relevant Legislation

The main pieces of Portuguese legislation that directly or indirectly influence the contents of this Network statement are given below:

Law 10/90, March 17th (altered by Law no. 3-B/2000, from April 4th) – Base law on land transport systems.

Decree-Law no. 116/92, from June 20th (altered by Decree-Law no. 274/98, September 5th), which contains the definition of the national rail network.

Decree-Law no. 104/97, from April 29, (altered by Decree-Laws no. 394-A/98, from December 15th, and no. 270/2003, from October 28th), which created REFER, revoked by DL 91/2015 with the exception of article 1, paragraph 1 and article 5.

Order no. 1094/98 (2nd series) (published in the Government Gazette, 2nd series, no. 15, from January 19th, 1998) relating to safety conditions in the operation of public transport (applicable to REFER under the terms of Order no. 4344/2000 (2nd series) published in the Government Gazette, 2nd series, no. 46, from February 24th, 2000.

Joint order no. 261/99, from March 5th, relating to the constitution of "concession establishment to CP".

Regulation no. 18/2000, relating to "rolling stock operations authorisation".

Ruling No. 1455/2001, dated from December 28th, regarding the terms for checking the conformity of wagons built prior to January 1st, 1977.

Decree-Law no. 270/2003, from October 28th (amended by the Declaration of Amendment no. 26/2003, from December 27th and amended and republished by Decree-Law no. 151/2014 of 13 October), in the part kept in force by Decree-Law no. 124-A/2018. Last amendment introduced by Decree-Law 85/2020 of 13 October.

Decree-Law no. 276/2003, from November 4th, relating to the public railway domain.

Ruling No. 167/2004, dated from February 18th, regarding the model of safety certificate to be obtained by the rail undertakings.

Decree Law 78/2005, from April 13th, establishing the new basis for the franchise of the North-South link altered and republished by Decree Law 174-A/2019, 18th December.

Decree-Law No. 9/2007, of 17 January, which approves the General Noise Regulation - ELI (European Legislation Identifier): https://data.dre.pt/eli/dec-lei/9/2007/01/17/p/dre/pt/html, with the rectifications introduced by the Rectification Declaration No. 18/2007, of 16 March – ELI: https://data.dre.pt/eli/declrectif/18/2007/03/16/p/dre/pt/html.

Decree-Law no. 231/2007, from June 14th, which transposed to the national legal system the Directive no. 2004/51/EC, from April 29th, altering Directive no. 91/440/EEC, from July 29th, regarding the development of the community railway and, partially, Directive no. 2004/49/EC, dated from April 29th, regarding the Community railway safety. Alteration and republishing of Decree-Law no. 270/2003, dated from October 28th.

Ruling no. 1543/2007, from December 6th, approving the regulations road and rail transport tankers.

Decree-Law no. 394/2007, from December 31st - Regime Applicable to Technical Investigation of Accidents and Incidents in Rail Transport (amended and republished by Decree-Law no. 101-C/2020, of 7 December), which partially transposes to the national legal system Directive no. 2004/49/EC, regarding the Community railway safety, and altering Directive no. 95/18/EC, which relates to capacity distribution of rail infrastructure, application of tariffs for the use of the railway infrastructure, and safety certification.

Decree-Law 58/2008, from March 26th which establishes the conditions to be complied with when contracting railway transportation for passengers and luggage, hand held volumes, pets, bicycles and other goods.

Decree Law 137-A/2009, of 12 June, which approves the legal system that applies to CP - Comboios de Portugal, E. P. E., along with the respective articles of association and authorises the spin-off of freight transport activity, revoking Decree Law 109/77, of 25 March, which approved the articles of association of Caminhos de Ferro Portugueses, E. P.

Regulation 442/2010, of 17 May, which establishes the procedures to issue safety authorisations to companies responsible for rail infrastructure management

Regulation 443/2010, of 17 May, which establishes the procedures to issue safety authorisations to rail transport service provider companies.

Regulation 444/2010, of 17 May, which establishes the authorisation procedures to entities established in Portugal – notified bodies – to assess compliance of components and subsystems regarding rail interoperability and cable facilities.

Decree Law 62/2010, of 9 June, which alters the common safety indicators and the common methods for calculating the costs of rail accidents, proceeding with the second alteration to Decree Law 270/2003, of 28 October and transposes Commission Directive 2009/149/CE, of 27 November.

Law 16/2011 of 3 May that approves the system to certify train drivers, amended by Decree Law 138/2015, of 30 July and by Decree Law n° 24/2017, of 1 March.

Decree Law n. ° 236/2012, 31 of October, which approves the organic of the Transports Mobility Institute, I.P. amended and republished by Decree Law no. 77/2014, of 14 May approving the functioning of Instituto da Mobilidade e dos Transportes, I.P.

Decree-Law No. 78/2014, of 14 may, approving the constitution of the mobility and Transport Authority

Commission Regulation (EU) No. 1305/2014 of 11 December 2014 on the technical specification for interoperability relating to the telematics applications for freight subsystem of the rail system in the European Union and repealing Regulation (EC) No. 62/2006.

Decision (EU) 2015/14 of 5 January 2015 amending decision 2012/88/EU on the technical specification for interoperability relating to the control-command and signalling subsystems of the trans-European rail system.

Commission implementing Regulation (EU) 2015/10 of 6 January 2015 on criteria for applicants for railway infrastructure capacity and repealing Regulation (EU) No 870/2014.

Decree-Law no. 91/2015 of May 29, on the merger between Rede Ferroviária Nacional – REFER, E.P.E and Estradas de Portugal, S.A. and the creation of a single company called Infraestruturas de Portugal. This Decree-Law revokes Decree-Law 104/97 of April 29, amended by Decrees-Law no. 394-A/98 of December 15, 270/2003 of October 28, 95/2008 of June 6, and 141/2008 of July 22, with the exception of no. 1 in article 1st as far as the creation of REFER, E.P.E is concerned, and of article 5th.

Decree-Law no. 138/2015 of 30 June transposing to the internal legal system Directive no. 2014/82/EU, which concerns general professional knowledge, medical requirements and requirements related to the train driver's license.

Decree-Law no. 217/2015 of October 7, transposing to the internal legal order the Directive no. 2012/34/EC of the European Parliament and of the Council of November 21 establishing a single European railway area, revoking Directive no. 91/440/EEC of the Council of July 29, 1991 on the development of the Community's railways, Directive no. 95/18/EC of the Council of June 19, 1995 on the licensing of railway transport companies, and Directive no. 2001/14/EC of the European Parliament and of the Council of February 26, 2001 on the allocation of railway infrastructure capacity and the levying of fees for the use of the railway infrastructure and the safety certification, which were transposed to domestic legal order by Decree-Law no. 270/2003 of October 28, which is the major regulatory framework on these issues within the sector of railway transport.

Commission Implementing Regulation (EU) 2015/909, on the modalities for the calculation of the cost that is directly incurred as a result of operating the train service, for the purposes of setting of charges of the Minimum Access Package and infrastructure access charges connecting service facilities.

Commission Regulation (EU) 2015/924 of 8 June 2015, amending Commission Regulation (EU) No. 321/2013 concerning the technical specification for interoperability relating to the 'rolling stock – freight wagons' subsystem of the rail system in the European Union.

Commission Regulation (EU) 2015/995 of 8 June 2015, amending Decision 2012/757/EU, concerning the technical specification for interoperability relating to the 'operation and traffic management' subsystem of the rail system in the European Union.

Commission Implementing Regulation (EU) 2015/1100 of 7 July 2015, on the reporting obligations of the Member States in the framework of rail market monitoring.

Commission Implementing Regulation (EU) 2016/545, on procedures and criteria concerning framework agreements for the allocation of rail infrastructure capacity..

Decree-Law no. 36/2017, of 28 March: It creates the Airplane and Railway Accidents Investigation and Prevention Office (Gabinete de Prevenção e Investigação de Acidentes com Aeronaves e de Acidentes Ferroviários - GPIAAF) and defines the respective mission, tasks and internal organisation.

Regulation (EU) 2016/2338 of the European Parliament and of the Council, of 14 December 2016, amending Regulation (EC) no. 1370/2007 concerning the opening of the market for domestic passenger transport services by rail (text relevant for EEA purposes).

Commission Implementing Regulation (EU) 2017/2177 of 22 November 2017 on access to service facilities and services in the rail sector (Text with EEA relevance).

Commission Delegated Regulation (EU) 2018/762 of 8 March sets out the common safety methods concerning requirements on the enterprise safety management system necessary to obtain a railway safety authorisation or certificate.

Commission Implementing Regulation (EU) 2018/763 of 9 April sets out procedures for issuing safety certificates to undertakings providing rail transport services.

Deliberation No. 517/2018, of 15 March, D.R. (II series) of 20 April: - Establishes the conditions for the certification of training entities and for the approval of training courses for safety advisors and drivers of dangerous goods vehicles, as well as the other requirements to be observed in that training.

Commission Implementing Regulation (EU) 2018/1795 of 20 November 2018 establishing the procedure and criteria for applying the economic balance test provided for in Article 11 of Directive 2012/34/EU of the European Parliament and of the Council.

Decree-Law no. 124-A/2018, of 31 December (supplement): – It transposes into national law the Directive (EU) 2016/2370, of the European Parliament and of the Council, of 14 December 2016, amending Directive 2012/34/EU concerning the opening of the market for domestic passenger transport and the governance of railway infrastructure.

Implementing Execution (EU) no. 2019/774 of the Commission, of 16 May 2019, changing Regulation (EU) no. 1304/2014 with regards to the application of the technical specification of interoperability for the "rolling stock — noise" subsystem to the wagons of the existing goods. - ELI: http://data.europa.eu/eli/reg_impl/2019/774/oj.

Regulation 910/2019, of 28 November, from AMT, related to the economical balance in railway public service contracts.

Commission Implementing Regulation (EU) 2020/424 of 19 March 2020 on the submission of information to the Commission on the non-application of technical specifications for interoperability in accordance with Directive (EU) 2016/797.

Commission Implementing Decision (EU) 2020/453 of 27 March 2020 on harmonised standards for rail products, prepared in support of Directive 2008/57/EC of the European Parliament and of the Council on the interoperability of the rail system within the Community.

Rectification of Commission Implementing Regulation (EU) 2020/572 of 24 April 2020 on the reporting structure to be respected in railway accident and incident investigation reports (<u>https://dre.pt/dre/detalhe/portaria/213-2020-142124831</u>).

Order 213/2020, of 7 September - Under the provisions of paragraphs 2 and 4 of Article 25 of Law 16/2011, establishes the requirements and procedures for the certification of training entities and initial and continuing training courses, aimed at obtaining and renewing the licence of locomotive and train driver of the railway system.

Order 214/2020 of 7 September - Under the provisions of paragraphs 2 and 4 of Article 25 of Law 16/20211, establishes the requirements and procedures for the recognition of entities providing services in the area of medicine and in the area of psychology that intend to carry out medical examinations and psychological assessments of candidates for train drivers and train drivers of locomotives and trains in the railway system.

Regulation (EU) 2020/1429 of the European Parliament and of the Council, of 7 October, establishing measures for a sustainable rail market in the context of the COVID-19 pandemic and Commission Delegated Regulation (EU) 2022/1036 of 29 June 2022 extending the period of application until 31.12.2022.

Decree-Law no. 85/2020, of 13 October 2020, which partially transposes Directive (EU) 2016/798, on railway safety. Partially revokes Decree-Law No. 270/2003, of October 28.

Decree-Law 91/2020 of 20 October which transposes Directive (EU) 2016/797 on the interoperability of the railway system within the European Union.

Commission Implementing Decision (EU) 2021/701 of 27 April 2021, correcting Implementing Decision 2011/665/EU on the European register of authorised types of railway vehicles.

Commission Delegated Regulation (EU) 2021/1061 of 28 June 2021, extending the reference period of Regulation (EU) 2020/1429 of the European Parliament and of the Council of 7 October 2020, which establishes measures for a sustainable railway market having regard to the outbreak of COVID-19.

Directive (EU) 2021/1187 of the European Parliament and of the Council of 7 July 2021, which lays down measures to facilitate the completion of the Trans-European Transport Network (TEN-T).

Decree-Law No. 99/2021, of 17 November, which amends the legal regime on the land transport of dangerous goods, transposing into national law the Commission Delegated Directive (EU) 2020/1833, of 2 October 2020.

Commission Implementing Regulation (EU) 2021/1903 of 29 October 2021 amending Implementing Regulation (EU) 2018/764 on the fees and charges payable to the European Union Agency for Railways and the conditions for their payment.

Deliberation no. 166/2022, of 9 February - Update of Deliberation no. 454/2019, of 25 February, as a result of changes arising from EU legislation. The purpose of this deliberation is to proceed with the first amendment to Deliberation No. 454/2019, of 25.02, published in the DR of 23.04.2019, which proceeded to define the requirements for access to the activity and exercise of the activity of provision of rail passenger transport services carried out exclusively for tourism or historical purposes, and to companies that carry out only passenger transport services on local and regional autonomous railway infrastructure.

Council Decision (EU) 2022/675 of 11 April 2022 establishing the position to be adopted, on behalf of the European Union, at the 57th session of the Committee of Experts on the Transport of Dangerous Goods of the Intergovernmental Organization for International Carriage by Rail with regard to certain amendments to Appendix C to the Convention concerning International Carriage by Rail.

INFRAESTRUTURAS DE PORTUGAL · 1st ADDENDA NETWORK STATEMENT 2024

ANNEX 2.3.8 Maximum Freight Train Lengths

Maximum length: It's the length compatible with the infrastructure's capacity;

Exceptional length: It's a length that can reach The permissible length of trains is based on calculation of the usable length of the lines of the stations, the traffic of each line and other particularities of operation.

According to the procedures followed when scheduling the train-paths, for each track, the following maximum lengths for freight trains were defined:

Basic length: length of the train to which the infrastructure offers conditions for crossing in any rail station;

750m, but which can only be set for occasional traffic under exceptional conditions;

IP may authorize exceptionally requests for train-path for trains exceeding the "maximum length", depending on the Line or track and scheduled traffic. Trainpath requests for trains with exceptional length must be submitted at least 30 days before the required date.

MAXIMUM FREIGHT TRAIN LENGTHS

ANNEX 2.6 Network Upgrading

According to the infrastructure investment Plan (Railroad 2020), the investments in railway infrastructure are shown in the table below:

ENTERPRISE	DESCRIPTION	EXPECTED CALENDAR
SOUTH INTERNATIONAL CORRIDOR - Sines / Setúbal / Lisbon - Caia	It is aimed at reinforcing the railway connection to the port of Sines with a view to increasing appeal thereof, as a point of entry to Europe, particularly to the Iberian Peninsula, broadening their hinterland and coordinating itself with other links to the ports of Lisbon and Setúbal. The purpose of executing this international railway connection includes providing a more efficient solution for rail freight transport, both between a departure point and a final destination as well as part of an intermodal logistics chain, so as to promote the national economy's competitiveness. It will also promote mobility of people between the regions of Alentejo and Lisbon and Vale do Tejo and	Work to be completed in 2023. Entry into service planned during 2024.
	consolidate the territory's external connectivity. The project comprises the construction of a new Évora / Caia section, as well as the modernization of existing sections, in a corridor that will ensure railway interoperability conditions at national, Iberian and European levels.	
NORTH INTERNATIONAL CORRIDOR – Beira Alta Line	The project is aimed at reinforcing the railway connection between the north and central areas of Portugal and Europe, in order to facilitate an effective rail freight transport, thus promoting the Portuguese economy's competitiveness. Works will be carried out for the following purposes:	Work to be completed in 2023. Entry into service planned during 2024.
	 To ensure railway corridor interoperability at national, Iberian, and European level; To remove constraints on the infrastructure of the Beira Alta line; To allow the movement of freight trains with a length of 750 m. 	

ENTERPRISE	DESCRIPTION	EXPECTED CALENDAR
NORTH/SOUTH CORRIDOR - Norte Line	 These investment project includes: Installation/modernization of signalling, suppression of level crossing and construction of unevenness, increase capacity for freight trains in order to allow the movement of freight trains of length up to 750m; Construction of new parking guards / overpasses on Francelos, Ovar- freight, Entroncamento and Mato de Miranda stations; Renewing the infrastructure lifecycle and increasing the security and flexibility of the operation, with the installation of a new signalling system on the following sections: Ovar-Gaia, and Santarém-Entroncamento. 	Electronic signaling on the Ovar-Gaia and Santarém-Entroncamento sections: in service. Modernization of Espinho/Gaia section: entry into service by end 2023. Modernization of Ovar/Espinho section: to be completed by end 2025 and entry into service in 2026.
COMPLEMENTARY CORRIDOR – Douro Line	The project covers the electrification, the installation of electronic signalling, speed control and telecommunications between Marco – Régua section.	Works to take place between 2024 and 2025.
COMPLEMENTARY CORRIDOR – Oeste Line	The project will enable a significant improvement in the transit of goods and people across the West region, reinforcing its inclusion in the national railway network, thus improving connections to the remaining national territory and to Spain, to the ports of Lisbon and Figueira da Foz, to the major industries and to Lisbon's metropolitan area. • The project includes the electrification between Meleças and Caldas as well as intervention	Works to be completed in 2023. Entry into service planned during 2024.
	 on signalling and telecommunications systems Creation of active diversions and crossing points in the Oeste Line and Alfarelos branch, in order to ensure freight traffic of 750-meter long trains. 	
COMPLEMENTARY CORRIDOR – Algarve Line	The Algarve Line constitutes a structuring axis for mobility in the major tourist attracting region in Portugal and of the latter with the remaining national, Iberian and European territories. Its modernisation is aimed at boosting both the regional and the national economy, meeting the growing mobility needs of people and goods across the whole region, particularly in a strategic business sector which generates significant revenues for the Portuguese economy.	Entry into service planned during 2024.
	The project covers the electrification between Faro / Vila Real de Santo António section and Tunes / Lagos in order to allow the use of electric traction between Faro / Vila Real de Sto. António and between Faro / Lagos.	

ENTERPRISE	DESCRIPTION	EXPECTED CALENDAR
COMPLEMENTARY CORRIDOR – Cascais Line	The purpose of the investment is the energy efficiency of public transport, within the Investment Priority Promoting low carbon strategies for all types of territories, namely urban areas, including the promotion of sustainable multimodal urban mobility and relevant adaptation measures for mitigation. The modernization of the Cascais Line will enable a more efficient, reliable, accessible and interoperable transport service offer, capable of reducing traction energy consumption and making the Cascais Line compatible with the rest of the National Rail Network.	Work to be completed in 2024.

ANNEX 3.3.1 Framework Agreement

Infraestruturas de Portugal, S.A., registered in the Commercial Registry Office of Lisbon under the single registration and VAT number 503 933 813, with head office in Almada, at Praça da Portagem, and with share capital of € [•] represented by Mr [•] and Mr [•], as [•] and [•], respectively, of the Executive Board of Directors, hereinafter referred to as IP, Infrastructure Manager or First Party

and

[Railway Company], with head office in $[\bullet]$, collective person no. $[\bullet]$, registered in the Commercial Registry Office of Lisbon under n^o. $[\bullet]$, hereby represented by Mr. $[\bullet]$ and Mr. $[\bullet]$, as Directors, with powers to bind it hereunder, hereinafter referred to as $[\bullet]$, the **Applicant**, or also the **Second Party**.

And whereas,

- Pursuant to Decree-Law No. 91/2015, of 29 May, the object of IP consists of the conception, design, construction, financing, conservation, operation, requalification, extension and modernization of the infrastructure that makes up the national railway network, including the command and control of railway circulation;
- 2) The provisions of Decree-Law 217/2015, of 7 October, amended and republished by Decree-Law 124-A/2018, of 31 December (DL) which defines the rules applicable to the management of railway infrastructure

and rail transport activities of railway companies established or to be established;

- The conditions set out by Commission Implementing Regulation (EU) 2016/545 of 7 April 2016 on procedures and criteria for Framework Agreements for the allocation of railway infrastructure capacity;
- 4) The provisions of the Network Statement, are mandatory for railway undertakings accessing and using the Portuguese railway network;
- 5) A Framework Agreement is a legally binding agreement setting out the rights and obligations of an applicant and the infrastructure manager in relation to the infrastructure capacity to be allocated and the charges to be applied over a period longer than one working timetable period;
- 6) The general procedures for requesting and allocating train paths under the Framework Agreement are set out in the Network Statement for the time period covered by the relevant Framework Agreement.

The present Framework Agreement is concluded between the parties and is governed by the terms and conditions set out in the following Clauses:

Clause One - Object

- The purpose of this Framework Agreement is to set out the procedures and criteria for the allocation of infrastructure capacity for a period of time longer than one working timetable period, and the respective rights and obligations of IP and the Applicant.
- 2. The Framework Agreement covers the allocation of infrastructure capacity of the RFN for the [passenger/goods] transport service on the lines set out in Annex 1.

3. The conditions of use of the train paths once allocated are regulated by the Network Statement.

Clause Two - Obligations of IP

- IP commits, as the national railway network infrastructure manager, to allocate to the Applicant, for each timetable covered, for the duration of this Framework Agreement, the capacity described in Annex 3 to this Framework Agreement.
- 2. To this end, IP shall allocate the corresponding capacity on an annual basis, according to the Applicant's requests, made for each service timetable, with the usual procedures and channels, described in the Network Statement in force.
- 3. IP guarantees the fulfilment of the requirements of this Framework Agreement with objective and non-discriminatory criteria, and in the necessary timeframes, taking into account Framework Agreements already signed, the rights of the Railway Undertakings and the efficient operation of the railway infrastructure.
- 4. The capacity characteristics of the infrastructure covered by the Framework Agreement shall remain constant throughout the term of the Framework Agreement and the capacity referred to shall take into account:
 - the known state and developments of the infrastructure at the time of the conclusion of this Framework Agreement, as set out in Annex 1;
 - the planning of maintenance works and investment in the RFN;
 - the existing public service contracts [specify the contracts concluded at that time];

- the technical characteristics and performance of the Applicant's trains, as communicated by the Applicant and described in Annex 2;
- the existence of specialized lines [if applicable];
- the existence of congested infrastructure [if applicable];
- priority rules;
- the need for infrastructure use by other applicants or other services, including the need for international corridor capacity.
- 5. If IP does not offer the paths corresponding to the capacity described in Annex 3, for reasons strictly attributable to IP, IP shall reimburse the Applicant with an amount corresponding to the amount due by the Applicant if he had reserved those paths.

Clause Three - Obligations of the Railway Company

- The Applicant commits to apply for each train path in accordance with the timetable, deadlines and infrastructure characteristics set out in the Network Statement in force, specifically in terms of the deadline for the submission of requests for train paths to be included in the Annual Timetable (X-8) and in accordance with the terms set out in this Framework Agreement.
- 2. Rolling stock used by the Applicant shall comply with the characteristics and performances described in Annex 2, for the duration of the Framework Agreement.
 - a) Any change in these characteristics shall be requested 3 months in advance and be accepted by IP.
 - b) In case it is not accepted by IP, the latter shall be reimbursed in accordance with paragraph 4 a) of this Clause.

- If the Applicant does not request the capacity agreed and set out in Annex
 IP is entitled to be reimbursed the amount that would be charged to the Applicant if it complied with the provisions of the Framework Agreement.
- 4. IP cannot request the reimbursement foreseen in the previous number if:
 - The Framework Agreement has been amended or cancelled for reasons beyond the Applicant's control and this has been duly communicated to IP, 14 months prior to the entry into force of the service schedule.
 - the Applicant has been denied an additional capacity request on which the viability of the planned train service depended.
 - IP is able to allocate an equivalent alternative path to the Applicant.

Clause Four - Exceptions to Obligations of the Parties

- 1. The obligations expressed in Clauses Two and Three shall not apply in the following circumstances:
 - a) Force majeure, defined as circumstances that cumulatively make it impossible - totally or partially - for the Parties to comply with their contractual obligations, if they are beyond their control, and whose occurrence is impossible to be known or foreseen when this Framework Agreement was signed and whose effects could not be reasonably avoided or prevented. Earthquakes, floods, fires, epidemics, sabotage, international embargoes, or blockades, acts of war or terrorism, riots and strikes of the employees of the respective companies that make the railway traffic impossible, may constitute force majeure if the aforementioned conditions are met.

 b) By decision of the regulator or any public authority with an impact on capacity allocation, such as the application of priority standards or advance notice of civil defense and security needs.

Clause Five - Duration of the Framework Agreement

- 1. This Framework Agreement shall enter into force on the date of its signature and shall expire on [as defined in Annex 3, subject to a limit of 5 years].
- 2. The Applicant may request renewal of the Framework Agreement, for an additional period of up to 5 years, subject to validation by IP, which depends on the Applicant's compliance with the commitments set out in the original Framework Agreement and any investments that IP may have planned or executed in view of the commitment made in the Framework Agreement.

Clause Six - Amendments to the Terms of the Framework Agreement

- 1. Any change in the conditions of this framework agreement is authorized for any of the following reasons:
 - a) At the request of one Party, if accepted by the other;
 - b) The publication of legislation affecting in whole or in part the provisions of this Framework Agreement.
- 2. IP may also amend or limit the terms of this Framework Agreement following the adoption of measures imposed by the Regulator for the more efficient use of the railway infrastructure or as safety improvements, which may affect the capacity offered described in Annex 3.
- 3. IP may further reduce committed capacity if, during the annual schedule, the [Railway Company] does not request train paths as provided for in this

Framework Agreement, unless the [Railway Company] justifies in accordance with the provisions of Clause Four.

Clause Seven - Termination of the Framework Agreement

- This Framework Agreement is terminated immediately, without prejudice to the right to indemnity to IP and without right of compensation to the Applicant, in the following cases:
 - a) revocation of the Railway Company's license;
 - b) loss of the Railway Company's safety certificate. In the event of partial loss, the provisions of the Framework Agreement shall be maintained for the capacity that has not been affected by such decision;
 - c) Non-compliance of the Railway Company's rolling stock with the technical characteristics of the infrastructure (maximum speed, stops, etc.).
- 2. The Candidate may terminate this Framework Agreement by registered letter with acknowledgement of receipt, giving fourteen months' notice before the service timetable comes into effect.
- 3. IP may unilaterally terminate this Framework Agreement by registered letter with acknowledgment of receipt in any of the following situations:
 - a) The Applicant has not submitted any request for capacity for the next timetable, nor justified such position in accordance with the provisions of Clause Four;
 - b) Applicant's failure to payment of the penalties due under this Framework Agreement or the fees provided for under the Network Statement;

- c) Failure to request, without notice, any path for more than two months or, with a limit of less than 70% in relation to the annual capacity agreed in Annex 3;
- d) Serious non-fulfilment, for reasons attributable to the Applicant, of the commitments undertaken in this Framework Agreement.

Clause Eight - Other Provisions

- Where the specific capacity requirements of the Applicant are greater than those described in Annex 3, the Applicant shall submit specific requests for additional routes in accordance with the standard procedures in the current Network Statement.
- 2. The Applicant may not transfer its rights and obligations under this Framework Agreement to another Applicant.

Clause Nine - Disputes Resolution

- Disputes between IP and the Applicant that may arise in connection with the application of this Framework Agreement shall be settled by agreement between the Parties.
- If agreement is not reached within one month after notification by either Party that it understands that the dispute, disagreement or doubt exists, the Parties may request the Regulator to mediate the dispute.

Clause Ten - Confidentiality

Without prejudice to the provisions of article 42 paragraph 12 of Decree-Law 217/2015, the Parties agree that the commercial aspects of this

agreement will be kept confidential and will not be transferred to third parties, within the limits of the relevant national legislation. This provision does not apply to information about the timetable and operational aspects of the use of the RFN.

Clause Eleven - General Data Protection Regulation

Without prejudice to the other obligations assumed in this agreement, the parties undertake to strictly comply with all legal precepts arising from the General Data Protection Regulation (Regulation EU 2016/679 of the European Parliament and of the Council of 27 April 2016) and other legislation in force, assuming full responsibility for any violation of this regulation that may occur in the context of the execution of this agreement.

Clause Twelve - Notifications and Communications

Any notifications or other communications to be made to either Party under this Framework Agreement shall be made by e-mail, with acknowledgement of receipt, and should be sent to the following addresses:

- a) IP: [●]
- b) [Railway Company]: [•]

Clause Thirteen - Applicable Law

The Agreement shall be governed by Portuguese law.

By,

Infraestruturas de Portugal, SA (IP, SA).

By,

[Applicant]

Done and signed in Lisbon, on

Annex 1 - Identification of the Lines considered under the Framework Agreement and expected developments

The content of this Annex is defined on a case-by-case basis.

Note: Updates to the Network Statement take precedence over the provisions of this Framework Agreement.

Annex 2 - Applicant Parameters

The content of this Annex is defined on a case-by-case basis and must contain, as a minimum, the identification and essential characteristics of the Rolling Stock.

Annex 3 - Allocated Framework Capacity - Matrix showing number of trains allocated including timetables and main dependencies

The content of this Annex is defined on a case-by-case basis.

ANNEX 4.10 Capacity Allocation Principles for the RFCs

1. Introduction

This annex describes the procedures for capacity allocation by the Corridor One Stop Shop (C-OSS) of a Rail Freight Corridor (Corridor).

All rules concerning applicants, the use of the C-OSS and its products — Pre-arranged Paths (PaPs) and Reserve Capacity (RC) — and how to order them are explained here. The processes, provisions and steps related to PaPs and RC refer to Regulation (EU) No. 913/2010 (Regulation) and are valid for all applicants. For all other issues, the relevant conditions presented in other parts of the Network Statement of the Infrastructure Manager (IMs)/Allocation Body(ABs) concerned are applicable.

This annex is revised and updated for each timetable year. Changes in the legal basis of this annex (e.g. changes in EU regulations, Framework for Capacity Allocation or national regulations) will be implemented with each revision.

2. Corridor OSS

According to Article 13 of the Regulation, the Management Board (MB) of the Corridor has established a C-OSS. The tasks of the C-OSS are carried

out in a non-discriminatory way and it maintains confidentiality regarding applicants.

2.1. Function

The C-OSS is the only body where applicants may request and receive dedicated infrastructure capacity for international freight trains on the Corridor. The handling of the requests takes place in a single place and a single operation. The C-OSS is exclusively responsible for performing all the activities related to the publication and allocation decision with regard to requests for PaPs and RC on behalf of the IMs / ABs concerned.

2.2 Contact

For the contact details to the relevant C-OSS refer to the main body of this Network Statement.

2.3 Language of the C-OSS

The official language of the C-OSS for correspondence is English.

2.4 Tasks of the C-OSS

The C-OSS executes the tasks below during the following processes:

- Collection of international capacity wishes:
 - → Consult all interested applicants in order to collect international capacity wishes and needs for the annual timetable by having them fill in a survey. This survey is sent by the C-OSS to the

applicants and/or published on the Corridor's website. The results of the survey will be one part of the inputs for the predesign of the PaP offer. It is important to stress that under no circumstances the Corridor can guarantee the fulfilment of all expressed capacity wishes, nor will there be any priority in allocation linked to the provision of similar capacity.

- Predesign of PaP offer:
 - → Give advice on the capacity offer, based on input received from the applicants, and the experience of the C-OSS and IMs/ABs, based on previous years and the results of the Transport Market Study.
- Construction phase:
 - → Monitor the PaP/RC construction to ensure harmonized border crossing times, calendar days and train parameters.
- Publication phase:
 - → Publish the PaP catalogue at X-11 in the Path Coordination System (PCS);
 - → Inspect the PaP catalogue in cooperation with IMs/ABs, perform all needed corrections of errors detected by any of the involved parties until X-10.5;
 - → Publish offer for the late path request phase (where late path offer is applicable) in PCS;
 - \rightarrow Publish the RC at X-2 in PCS.
- Allocation phase: annual timetable (annual timetable process)

- → Collect, check and review all requests for PaPs including error fixing when possible;
- → Create a register of the applications and keep it up-to-date (see 2.4.1).
- → Manage the resolution of conflicting requests through consultation where applicable;
- → In case of conflicting requests, take a decision on the basis of priority rules adopted by the Executive Board along the Corridor (see 3.1 Framework for Capacity Allocation (FCA);
- → Propose alternative PaPs, if available, to the applicants whose applications have a lower priority value (K value) due to a conflict between several path requests;
- → Transmit path requests that cannot be treated to the IM/AB concerned, in order for them to elaborate tailor-made offers;
- → Pre-book capacity and inform applicants about the results at X-7.5;
- → Allocate capacity (PaPs) in conformity with the relevant international timetabling deadlines (see 3.12) and processes as defined by RailNetEurope (RNE) and according to the allocation rules described in the FCA;
- → Monitor the construction of feeder and/or outflow paths by sending these requests to the IMs/ABs concerned and obtain their responses/offers. In case of non-consistent offers (e.g. non-harmonised border times), ask for correction;

- → Send the responses/offers (draft offer and final offer including feeder and outflow) to the applicants on behalf of the IMs/ABs concerned;
- \rightarrow Keep the PaP catalogue updated.
- Allocation phase: late path requests (annual timetable process)
 - → Collect, check and review all requests for the late path request phase including error fixing when possible;
 - → Allocate capacity for the late path request phase where applicable;
 - → Monitor the construction of feeder and/or outflow paths by sending these requests to the IMs/ABs concerned and obtain their responses/offers. In case of non-consistent offers (e.g. non-harmonized border times), ask for correction;
 - → Send the responses/offers to the applicants on behalf of the IMs/ABs concerned;
 - \rightarrow Keep the catalogue concerned updated.
- Allocation phase: ad-hoc requests (RC) (running timetable process)
 - → Collect, check and review all requests for RC including error fixing when possible;
 - \rightarrow Create a register of the applications and keep it up-to-date;
 - \rightarrow Allocate capacity for RC;
 - → Monitor the construction of feeder and/or outflow paths by sending these requests to the IMs/ABs concerned and obtain their responses/offers. In case of non-consistent offers (e.g. non-harmonized border times), ask for correction;

- → Send the responses/offers to the applicants on behalf of the IMs/ABs concerned;
- \rightarrow Keep the RC catalogue updated.

2.4.1 Path register

The C-OSS manages and keeps a path register up-to-date for all incoming requests, containing the dates of the requests, the names of the applicants, details of the documentation supplied and of incidents that have occurred. A path register shall be made freely available to all applicants concerned without disclosing the identity of other applicants, unless the applicants concerned have agreed to such a disclosure. The contents of the register will only be communicated to them on request.

2.5 Tool

PCS is the single tool for publishing the binding PaP and RC offer of the Corridor and for placing and managing international path requests on the Corridor.

Applications for PaPs/RC can only be made via PCS to the involved C-OSS. If the application is made directly to the IMs/ABs concerned, they inform the applicant that they have to place a correct PaP/RC request in PCS via the C-OSS according to the applicable deadlines. PaP/RC capacity requested only through national tools will not be allocated.

In other words, PaP/RC applications cannot be placed through any other tool than PCS.

3. Capacity allocation

The decision on the allocation of PaPs and RC on the Corridor is taken by the C-OSS on behalf of the IMs/ABs concerned. As regards feeder and/or outflow paths, the allocation decision is made by the relevant IMs/ABs and communicated to the applicant by the C-OSS. Consistent path construction containing the feeder and/or outflow sections and the corridor-related path section has to be ensured.

All necessary contractual relations regarding network access have to be dealt with bilaterally between the applicant and each individual IM/AB.

3.1 Framework for Capacity Allocation

Referring to Article 14.1 of the Regulation, the Executive Boards of the Rail Freight Corridors agreed upon a common Framework for Capacity Allocation (FCA). These documents are available in the CIP under https://cip-online.rne.eu/. The FCA constitutes the basis for capacity allocation by the C-OSS.

3.2 Applicants

Applicants shall accept the general terms and conditions of the Corridor in PCS before placing their requests.

Without accepting the general terms and conditions, the applicant will not be able to send the request. In case a request is placed by several applicants, every applicant requesting PaP sections has to accept the general terms and conditions for each corridor on which the applicant is requesting a PaP section. In case one of the applicants only requests a feeder or outflow section, the acceptance of the general terms and conditions is not needed.

The acceptance shall be done only once per applicant and per corridor and is valid for one timetable period.

With the acceptance the applicant declares that it:

- has read, understood and accepted the Corridor's CID and, in particular, the Section 4 of it,
- complies with all conditions set by applicable legislation and by the IMs/ABs involved in the paths it has requested, including all administrative and financial requirements,
- shall provide all data required for the path requests,
- accepts the provisions of the national Network Statements applicable to the path(s) requested.

In case of a non-RU applicant, it shall appoint the RU that will be responsible for train operation and inform the C-OSS and IMs/ABs about this RU as early as possible, but at the latest 30 days before the running day. If the appointment is not provided by this date, the PaP/RC is considered as cancelled, and national rules for path cancellation are applicable.

In case the applicant is a non-RU applicant, and applies for feeder / outflow paths, the national rules for nomination of the executing RU will be applied.

3.3 Requirements for requesting capacity

The Corridor applies the international timetabling deadlines defined by RNE for placing path requests as well as for allocating paths (for the Corridor calendar, see <u>http://www.rne.eu/sales-timetabling/timetabling-calender</u> /or Chapter 3.12).

All applications have to be submitted via PCS, which is the single tool for requesting and managing capacity on all corridors. The C-OSS is not entitled to create PCS dossiers on behalf of the applicant. If requested, the C-OSS can support applicants in creating the dossiers in order to prevent inconsistencies and guide the applicants' expectations (maximum 1 week prior to the request deadline). The IMs/ABs may support applicants by providing a technical check of the requests.

A request for international freight capacity via the C-OSS has to fulfil the following requirements:

- it must be submitted to a C-OSS by using PCS, including at least one PaP/RC section. Details are explained in the PCS User Manual http://cms.rne.eu/pcs/pcs-documentation/pcs-basics),
- it must cross at least one border on a corridor,
- it must comprise a train run from origin to destination, including PaP/RC sections on one or more corridors as well as, where applicable, feeder and/or outflow paths, on all of its running days. In certain cases, which are due to technical limitations of PCS, a

request may have to be submitted in the form of more than one dossier. These specific cases are the following:

- → Different origin and/or destination depending on running day (But using identical PaP/RC capacity for at least one of the IMs for which capacity was requested).
- → Transshipment from one train onto different trains (or vice versa) because of infrastructure restrictions.
- → The IM/AB specifically asks the applicant to split the request into two or more dossiers.

To be able for the C-OSS to identify such dossiers as one request, and to allow a correct calculation of the priority value (K value) in case a request has to be submitted in more than one dossier, the applicant should indicate the link among these dossiers in PCS. Furthermore, the applicant should mention the reason for using more than one dossier in the comment field.

- the technical parameters of the path request have to be within the range of the parameters – as originally published – of the requested PaP sections (exceptions are possible if allowed by the IM/AB concerned, e.g. when the timetable of the PaP can be respected)
- as regards sections with flexible times, the applicant may adjust/insert times, stops and parameters according to its individual needs within the given range.

In case of some Corridors further specific requirements for additional cases may be applied. For the description of such requirements refer to the CIDs of individual Corridors.

3.4 Annual timetable phase

3.4.1 PaPs

PaPs are a joint offer of coordinated cross-border paths for the annual timetable produced by IMs/ABs involved in the Corridor. The C-OSS acts as a single point of contact for the publication and allocation of PaPs.

PaPs constitute an off-the-shelf capacity product for international rail freight services. In order to meet the applicants' need for flexibility and the market demand on the Corridor, PaPs are split up in several sections, instead of being supplied as entire PaPs, as for example from 'Start Point(s)' to 'End Point(s)'. Therefore, the offer might also include some purely national PaP sections – to be requested from the C-OSS for freight trains crossing at least one border on a corridor in the context of international path applications.

A catalogue of PaPs is published by the C-OSS in preparation of each timetable period. It is published in PCS.

PaPs are published in PCS at X-11. Between X-11 and X-10.5 the C-OSS is allowed to perform, in PCS, all needed corrections of errors regarding the published PaPs detected by any of the involved parties. In this phase, the published PaPs have 'read only' status for applicants, who may also provide input to the C-OSS regarding the correction of errors.

3.4.2 Schematic corridor map

A schematic map of each Corridor can be found as an annex to its CID.

3.4.3 Features of PaPs

A PaP timetable is published containing one of the following features:

- Sections with fixed times (data cannot be modified in the path request by an applicant).
 - → Capacity with fixed origin, intermediate and destination times within one IM/AB.
 - → Intermediate Points and Operational Points with fixed times. Requests for changes to the published PaP have to be examined by the IMs/ABs concerned and can only be accepted if they are feasible and if this does not change the calculation of the priority rule in case of conflicting requests at X-8.
- Sections with flexible times (data may be modified in the path request by an applicant according to individual needs, but without exceeding the given range of standard running times, stopping times and train parameters. Where applicable, the maximum number of stops and total stopping time per section have to be respected).

- → Applicants are free to include their own requirements in their PaP request within the parameters mentioned in the PaP catalogue.
- → Where applicable, the indication of standard journey times for each corridor section has to be respected.
- → Optional: Intermediate Points without fixed times. Other points on the Corridor may be requested.
- \rightarrow Optional: Operational Points without fixed times.

Requests for changes outside of the above-mentioned flexibility have to be examined by the IMs/ABs concerned if they accept the requests. The changes can only be accepted if they are feasible.

The C-OSS promotes the PaPs by presenting them to existing and potential applicants.

For the description of further specificities refer to the CIDs of individual Corridors.

In case of some Corridors the capacity bandwidth approach may be applied. For the description of the characteristics of specific capacity bandwidth approaches refer to the CIDs of individual Corridors.

3.4.4 Multiple corridor paths

It is possible for capacity requests to cover more than one corridor. A PaP offer harmonised by different corridors may be published and indicated as such. The applicant may request PaP sections on different corridors within one request. Each C-OSS remains responsible for allocating its own PaP sections, but the applicant may address its questions to only one of the involved C-OSSs, who will coordinate with the other concerned C-OSSs whenever needed.

Multiple corridor paths on the Corridor are to be displayed on a map in Annex 4C to the CID of each Corridor.

3.4.5 PaPs on overlapping sections

The layout of the corridor lines leads to situations where some corridor lines overlap with others. The aim of the corridors, in this case, is to prepare the best possible offer, taking into account the different traffic flows and to show the possible solutions to link the overlapping sections concerned with the rest of the corridors in question.

In case of overlapping sections, corridors may develop a common offer, visible via all corridors concerned. These involved corridors will decide which C-OSS is responsible for the final allocation decision on the published capacity. In case of conflict, the responsible C-OSS will deal with the process of deciding which request should have priority together with the other C-OSSs. In any case, the applicant will be consulted by the responsible C-OSS.

Description of common offers on overlapping sections is to be displayed on a map in Annex 4C to the CID of each Corridor.

3.4.6 Feeder, outflow and tailor-made paths

In case available PaPs do not cover the entire requested path, the applicant may include a feeder and/or outflow path to the PaP section(s) in the international request addressed to the C-OSS via PCS in a single request.

A feeder/outflow path refers to any path section prior to reaching an Intermediate Point on a corridor (feeder path) or any path section after leaving a corridor at an Intermediate Point (outflow path).

Feeder / outflow paths will be constructed on request in the PCS dossiers concerned by following the national path allocation rules. The offer is communicated to the applicant by the C-OSS within the same time frame available for the communication of the requested PaPs. Requesting a tailor-made path between two PaP sections is possible, but because of the difficulty for IMs/ABs to link two PaP sections, a suitable offer might be less likely (for further explanation see 3.4.16).

Graph with possible scenarios for feeder/outflow paths in connection with a request for one or more PaP section(s):

3.4.7 Handling of requests

The C-OSS publishes the PaP catalogue at X-11 in PCS, inspects it in cooperation with IMs/ABs, and performs all needed corrections of errors detected by any of the involved parties until X-10.5. Applicants can submit their requests until X-8. The C-OSS offers a single point of contact to applicants, allowing them to submit requests and receive answers regarding corridor capacity for international freight trains crossing at least one border on a corridor in one single operation. If requested, the C-OSS can support applicants in creating the dossiers to prevent inconsistencies and guide the applicants' expectations. The IMs/ABs may support the applicants by providing a technical check of the requests.

3.4.8 Leading tool for the handling of capacity requests

Applicants sending requests to the C-OSS shall use PCS. Within the construction process of feeder and/or outflow paths and tailor-made

paths, the national tool may show additional information to the applicant.

The following matrix shows for each step of the process which tool is considered as the leading tool.

Phase	Application (till X-8)	Withdrawal (X-8)	Pre-booking (X-7.5)	Draft offer (X-5)	Observation (X-5 till X-4)	Final offer (X-3.5)	Acceptance (until X-3)	Modification (after X-4)	Cancellation (after X-4)
Leading tool	PCS	PCS	PCS	PCS	PCS	PCS	PCS	PCS	PCS
Additio			Email						
nal tool			(for pre-						
			booking information)						

3.4.9 Check of the applications

The C-OSS assumes that the applicant has accepted the published PaP characteristics by requesting the selected PaP. However, for all incoming capacity requests it will perform the following plausibility checks:

- Request for freight train using PaP and crossing at least one border on a corridor
- Request without major change of parameters
- If there are plausibility flaws, the C-OSS may check with the applicant whether these can be resolved:

- If the issue can be solved, the request will be corrected by the C-OSS (after the approval of the applicants concerned) and processed like all other requests. The applicant has to accept or reject the corrections within 5 calendar days. In case the applicant does not answer or reject the corrections, the C-OSS forwards the original request to the IM/AB concerned.
- If the issue cannot be resolved, the request will be rejected.

All requests not respecting the published offer are immediately forwarded by the C-OSS to the IM/AB concerned for further treatment. In those cases, answers are provided by the involved IM/AB. The IMs/ABs will accept them as placed in time (i.e. until X-8).

In case of some Corridors additional checks may be applied. For the description of these additional checks refer to the CIDs of individual Corridors.

In case of missing or inconsistent data the C-OSS directly contacts the leading applicant and asks for the relevant data update/changes to be delivered within 5 calendar days.

In general: in case a request contains PaPs on several corridors, the C-OSSs concerned check the capacity request in cooperation with the other involved C-OSS(s) to ensure their cooperation in treating multiple corridor requests. This way, the cumulated length of PaPs requested on each corridor is used to calculate the priority value (K value) of

possible conflicting requests (see more details in 3.4.11). The different corridors can thus be seen as part of one combined network.

3.4.10 Pre-booking phase

In the event of conflicting requests for PaPs placed until X-8, a priority rule is applied. The priority rules are stated in the FCA (see 3.1) and in 3.4.11.

On behalf of the IMs/ABs concerned and according to the result of the application of the priority rules - as detailed in 3.4.11 - the C-OSS prebooks the PaPs.

The C-OSS also forwards the requested feeder/outflow path and/or adjustment to the IMs/ABs concerned for elaboration of a timetable offer fitting to the PaP already reserved (pre-booked), just as might be the case with requests with a lower priority value (priority rule process below). The latter will be handled in the following order:

- consultation may be applied;
- alternatives may be offered (if available);
- if none of the above steps were applied or successful, the requested timetable will be forwarded to the IMs/ABs concerned to elaborate a tailor-made offer as close as possible to the initial request.

3.4.11 Priority rules in capacity allocation

Conflicts are solved with the following steps, which are in line with the FCA:

- A. A resolution through consultation may be promoted and performed between applicants and the C-OSS, if the following criteria are met:
 - The conflict is only on a single corridor.
 - Suitable alternative PaPs are available.
- B. Applying the priority rule as described in Annex 1 of the FCA (see 3.1) and in 3.4.13 and 3.4.14.
 - a. Cases where no Network PaP is involved (see 3.4.13)
 - Cases where Network PaP is involved in at least one of the requests (see 3.4.14)

The Table of Distances in Annex 4.E to the CID of each Corridor shows the distances taken into account in the priority calculation.

C. Random selection (see 3.4.15).

In the case that more than one PaP is available for the published reference PaP, the C-OSS pre-books the PaPs with the highest priority until the published threshold is reached. When this threshold is reached, the C-OSS will apply the procedure for handling requests with a lower priority as listed above.

In case of some Corridors the resolution through consultation may be applied. For the description of such resolution through consultation refer to the CIDs of individual Corridors.

3.4.12 Network PaP

A Network PaP is not a path product. However, certain PaPs may be designated by Corridors as 'Network PaPs', in most cases for capacity requests involving more than one Corridor. Network PaPs are designed to be taken into account for the definition of the priority of a request, for example on PaP sections with scarce capacity. The aim is to make the best use of available capacity and provide a better match with traffic demand.

For the time being, Network PaPs are not being offered by any of the Corridors.

3.4.13 Priority rule in case no Network PaP is involved

The priority is calculated according to this formula:

 $K = (LPAP + LF/O) \times YRD$

 L^{PAP} = Total requested length of all PaP sections on all involved RFCs included in one request. The definition of a request can be found in 3.3.

 $L^{F/O}$ = Total requested length of the feeder/outflow path(s) included in one request; for the sake of practicality, is assumed to be the distance as the crow flies.

 Y^{RD} = Number of requested running days for the timetable period. A running day will only be taken into account for the

priority calculation if it refers to a date with a published PaP offer for the given section.

K = The rate for priority

All lengths are counted in kilometres.

The method of applying this formula is:

- in a first step the priority value (K) is calculated using only the total requested length of pre-arranged path (LPAP) multiplied by the Number of requested running days (YRD);
- if the requests cannot be separated in this way, the priority value
 (K) is calculated using the total length of the complete paths (LPAP + LF/O) multiplied by the number of requested running days (YRD) in order to separate the requests;
- if the requests cannot be separated in this way, a random selection is used to separate the requests. This random selection is described in 3.4.15.

3.4.14 Priority rule if a Network PaP is involved in at least one of the conflicting requests

For the time being, Network PaPs are not being offered by any of the Corridors.

3.4.15 Random selection

If the requests cannot be separated by the above-mentioned priority rules, a random selection is used to separate the requests.

- The respective applicants will be acknowledged of the undecided conflict before X-7.5 and invited to attend a drawing of lots.
- The actual drawing will be prepared and executed by the C-OSS, with complete transparency.
- The result of the drawing will be communicated to all involved parties, present or not, via PCS and e-mail, before X-7.5.

In case of some Corridors a different rule for the random selection process may be applied. For the description of such different rule for the random selection process refer to the CIDs of individual Corridors.

3.4.16 Special cases of requests and their treatment

The following special use of PaPs is known out of the allocation within the past timetables: Division of continuous offer in shares identified by the PaP ID (PaPs / non-PaPs). This refers to the situation when applicants request corridor capacity (on one or more corridors) in the following order:

- 1) PaP section
- 2) Tailor-made section
- 3) PaP section

These requests will be taken into consideration, depending on the construction starting point in the request, as follows:

- Construction starting point at the beginning: The C-OSS pre-books the PaP sections from origin until the end of the first continuous PaP section. No section after the interruption of PaP sections will be prebooked; they will be treated as tailor-made.
- Construction starting point at the end: The C-OSS pre-books the PaP sections from the destination of the request until the beginning of the last continuous PaP section. No sections between the origin and the interruption of the PaP sections will be pre-booked; they will be treated as tailor-made.
- Construction starting point in the middle: The C-OSS pre-books the longest of the requested PaP sections either before or after the interruption. No other sections will be pre-booked; they will be treated as tailor-made.

However, in each of the above cases, the requested PaP capacity that becomes tailor-made might be allocated at a later stage if the IMs/ABs can deliver the tailor-made share as requested. In case of allocation, the PaP share that can become tailor-made retains full protection. This type of request doesn't influence the application of the priority rule.

3.4.17 Result of the pre-booking

The C-OSS provides interim information to applicants regarding the status of their application no later than X-7.5.

In the case that consultation was applied, the applicants concerned are informed about the outcome.

In the case that no consultation was applied, the interim notification informs applicants with a higher priority value (K value) about prebooking decisions in their favour.

In case of conflicting requests with a lower priority value, the C-OSS shall offer an alternative PaP, if available. The applicant concerned has to accept or reject the offered alternative within 5 calendar days. In case the applicant does not answer, or rejects the alternative, or no alternative is available, the C-OSS forwards the original request to the IM/AB concerned. The C-OSS informs the applicants with a lower priority value (K value) by X-7.5 that their path request has been forwarded to the IM/AB concerned for further treatment within the regular process for the annual timetable construction, and that the C-OSS will provide the draft path offer on behalf of the IM/AB concerned

at X-5 via PCS. These applications are handled by the IM/AB concerned as on-time applications for the annual timetable and are therefore included in the regular national construction process of the annual timetable.

3.4.18 Handling of non-requested PaPs

There are two ways of handling non-requested PaPs at X-7.5, based on the decision of the MB.

- A. After pre-booking, all non-requested PaPs are handed over to the IM/AB.
- B. The MB takes a decision regarding the capacity to be republished after X-7.5. This decision depends on the "booking situation" at that moment. More precisely, at least the following three criteria must be fulfilled in the following order of importance):
 - 1. There must be enough capacity for late requests, if applicable, and RC.
 - 2. Take into account the demand for international paths for freight trains placed by other means than PCS.
 - 3. Take into account the need for modification of the capacity offer due to possible changes in the planning of TCRs.

Information on the way in which the non-requested PaPs are being handled is provided in the CID of each Corridor.

3.4.19 Draft offer

After receiving the pre-booking decision by the C-OSS, the IMs/ABs concerned will elaborate the flexible parts of the requests:

- Feeder, outflow or intermediate sections;
- Pre-booked sections for which the published timetable is not available anymore due to external influences, e.g. temporary capacity restrictions;
- In case of modifications to the published timetable requested by the applicant;
- In case of an alternative offer that was rejected by the applicant or is not available.

In case IMs/ABs cannot create the draft offer due to specific wishes of the applicant not being feasible, the C-OSS has to reject the request.

The C-OSSs shall be informed about the progress, especially regarding the parts of the requests that cannot be fulfilled, as well as conflicts and problems in harmonising the path offers.

At the RNE draft timetable deadline (X-5) the C-OSS communicates the draft timetable offer for every handled request concerning pre-booked PaPs including feeder and/or outflow, tailor-made sections and tailor-made offers in case of conflicting requests to the applicant via PCS on behalf of the IM/AB concerned.

3.4.20 Observations

Applicants can place observations on the draft timetable offer in PCS one month from the date stated in 3.12, which are monitored by the C-OSS. The C-OSS can support the applicants regarding their observations. This procedure only concerns observations related to the original path request — whereas modifications to the original path requests are treated as described in 3.7.1 (without further involvement of the C-OSS).

3.4.21 Post-processing

Based on the above-mentioned observations the IMs/ABs have the opportunity to revise offers between X-4 and X-3.5. The updated offer is provided to the C-OSS, which – after a consistency check – submits the final offer to the applicant in PCS.

3.4.22 Final offer

At the final offer deadline (X-3.5), the C-OSS communicates the final timetable offer for every valid PaP request including feeder and/or outflow, tailor-made sections and tailor-made offers in case of conflicting requests to the applicants via PCS on behalf of the IM/AB concerned. If, for operational reasons, publication via national tools is still necessary (e.g. to produce documents for train drivers), the IMs/ABs have to ensure that there are no discrepancies between PCS and the national tool.

The applicants involved shall accept or reject the final offer within 5 calendar days in PCS.

- Acceptance > leads to allocation,
- Rejection > leads to withdrawal and closing of the request,
- No answer > The C-OSS will actively try to get an answer. In case there is no answer from the applicants, the C-OSS will end the process (no allocation).

If not all applicants agree on the final offer, the request will be considered as unanswered.

3.5 Late path request phase

Late path requests refer to capacity requests concerning the annual timetable sent to the C-OSS within the timeframe from X-7.5 until X-2.

It is stated in the CID of each Corridor whether it offers the possibility to place late path requests or not.

3.5.1 Product

Capacity for late path requests can be offered in the following ways:

- A. In the same way, as for PaPs, either specially constructed paths for late path requests or PaPs which were not used for the annual timetable.
- B. On the basis of capacity slots. Slots are displayed per corridor section and the standard running time is indicated. To order capacity for late path requests, corridor sections without any time

indications are available in PCS. The applicant may indicate his individually required departure and/or arrival times, and feeder and outflow path(s), as well as construction starting point. The indications should respect the indicated standard running times.

Capacity for late path request has to be requested via PCS either in the same way as for PaPs or by using capacity slots in PCS.

If the Corridor offers the possibility to place late path requests, it is stated in the CID of that Corridor which of the above variants would be used.

3.5.2 Multiple corridor paths

It is possible for capacity requests to cover more than one corridor if capacity is offered. See 3.4.4.

3.5.3 Late paths on overlapping sections

See 3.4.5.

Description of common offers on overlapping sections can be found on a map in Annex 4C to the CID of each Corridor.

3.5.4 Handling of requests

The C-OSS receives and collects all path requests that are placed via PCS.

3.5.5 Leading tool for late path requests

Applicants sending late path requests to the C-OSS shall use PCS. Within the construction process, the national tool may show additional information to the applicant.

The following matrix shows for each step of the process which tool is considered as the leading tool.

Phase	Application (X-7.5 till X-2)	Withdrawal (X-8 till X-2)	Offer (X-1)	Acceptance (until X-0.75)	Modification	Cancellation
Leading tool	PCS	PCS	PCS	PCS	PCS	PCS

3.5.6 Check of the applications

The C-OSS checks all requests as described in 3.4.9.

3.5.7 Pre-booking

The C-OSS coordinates the offer with the IMs/ABs concerned or other C-OSS if needed by following the rule of "first come – first served".

3.5.8 Path elaboration

During the path elaboration phase, the IMs/ABs concerned will prepare the Late Path offer under coordination of the C-OSS.

3.5.9 Late request offer

All applicants involved shall accept, ask for adaptations or reject the late request offer within 5 calendar days in PCS. By triggering the 'ask for adaptation' function, applicants can place comments on the late request offer, which will be monitored by the C-OSS. This procedure only concerns comments related to the original path request – whereas modifications to the original path requests are treated as described in 3.7.1 (without further involvement of the C-OSS).

- Acceptance > leads to allocation,
- Ask for adaptations > late offer can be returned to path elaboration with comments; IM/AB will make an alternative proposal; however, if no alternatives are possible, the applicant will have to prepare a new request,
- Rejection > leads to withdrawal and closing of the request,
- No answer > The C-OSS will actively try to get an answer. In case there is still no answer from the applicants, the C-OSS will end the process (no allocation).

If not all applicants agree on the final offer, the request will be considered as unanswered.

3.6 Ad-hoc path request phase

3.6.1 Reserve capacity (RC)

During the ad-hoc path request phase, the C-OSS offers RC based on PaPs or capacity slots to allow for a quick and optimal answer to ad-hoc path requests:

- A. RC based on PaPs will be a collection of several sections along the Corridor, either of non-requested PaPs and/or PaPs constructed out of remaining capacity by the IMs/ABs after the allocation of overall capacity for the annual timetable as well as in the late path request phase.
- B. In case RC is offered on the basis of capacity slots, slots are displayed per corridor section and the standard running time is indicated. The involved IMs/ABs jointly determine the amount of RC for the next timetable year between X-3 and X-2. The determined slots may not be decreased by the IMs/ABs during the last three months before real time.

To order reserve capacity slots, corridor sections without any time indication are available in PCS. The applicant may indicate his individually required departure and/or arrival times, feeder and outflow path(s) as well as construction starting point. The indications should respect the indicated standard running times as far as possible.

It is stated in the CID of each Corridor through which variant that Corridor offers RC. In case a Corridor offers the RC through variant B, the relevant time frames are also specified in the CID of that Corridor.

RC is published by the C-OSS at X-2 in PCS.

The IMs can modify or withdraw RC for a certain period in case of unavailability of capacity due to force majeure. Applicants can book RC via the C-OSS until 30 days before the running day. To make ad-hoc requests less than 30 days before the running day, they have to contact the IMs/ABs directly.

3.6.2 Multiple corridor paths

It is possible for capacity requests to cover more than one corridor. See 3.4.4.

3.6.3 Reserve capacity on overlapping sections

See 3.4.5.

Description of common offers on overlapping sections is to be displayed on a map in Annex 4C to the CID of each Corridor.

3.6.4 Feeder, outflow and tailor-made paths

See 3.4.6. For RC the same concept applies as for PaPs in the annual timetable.

3.6.5 Handling of requests

The C-OSS receives and collects all path requests for RC placed via PCS until 30 days before the running day. If requested, the C-OSS can support applicants in creating the dossiers to prevent inconsistencies and guide the applicants' expectations. The IMs/ABs may support the applicants by providing a technical check of the requests.

3.6.6 Leading tool for ad-hoc requests

Applicants sending requests for RC to the C-OSS shall use PCS. Within the construction process, the national tool may show additional information to the applicant.

The following matrix shows for each step of the process which tool is considered as the leading tool.

Phase	Application and allocation (X-2 till X+12)	Withdrawal	Offer (10 calendar days before train run)	Answer (within 5 calendar days after offer)	Modification	Cancellation
Leading tool	PCS	PCS	PCS	PCS	National tool/PCS	National tool/PCS

3.6.7 Check of the applications

The C-OSS checks all requests as described in 3.4.9.

3.6.8 Pre-booking

The C-OSS applies the 'first come – first served' rule.

3.6.9 Path elaboration

During the path elaboration phase, the IMs/ABs concerned will prepare the offer under coordination of the C-OSS.

3.6.10 Ad-hoc request offer

Applicants shall receive the ad-hoc offer no later than 10 calendar days before the train run. All applicants involved shall accept, ask for adaptations or reject the ad-hoc offer within 5 calendar days in PCS. By triggering the 'ask for adaptation' function, applicants can place comments on the ad-hoc request offer, which will be monitored by the C-OSS. This procedure only concerns comments related to the original path request – whereas modifications to the original path requests are treated as described in 3.7.1 (without further involvement of the C-OSS).

- Acceptance > leads to allocation,
- Ask for adaptations > ad-hoc offer can be returned to path elaboration with comments; IM/AB will make an alternative proposal; however, if no alternatives are possible, the applicant will have to prepare a new request,
- Rejection > leads to withdrawal of the offer and closing of the request,

 No answer > The C-OSS will actively try to get an answer. In case there is still no answer from the applicants, the C-OSS will end the process (no allocation).

If not all applicants agree on the final offer, the request will be considered as unanswered.

3.7 Request for changes by the applicant

3.7.1 Modification

The Sector Handbook for the communication between Railway Undertakings and Infrastructure Managers (RU/IM Telematics Sector Handbook) is the specification of the TAF-TSI (EC) No. 1305/2014 Regulation. According to its Annex 12.2 UML Model of the yearly timetable path request, it is not possible to place change requests for paths (even including PaPs) by the applicant between X-8 and X-5. The only option in this period is the deletion, meaning the withdrawal, of the path request.

3.7.2 Withdrawal

Withdrawing a request is only possible

- After submitting the request (until X-8) until the final offer
- before allocation during the late path request phase (where applicable) and ad-hoc path request phase.

Resubmitting the withdrawn dossier will be considered as annual request only until X-8.

The national rules regarding withdrawal fees and deadlines will apply.

3.7.3 Transfer of capacity

Once capacity is pre-booked or allocated to an applicant, it shall not be transferred by the recipient to another applicant. The use of capacity by an RU that carries out business on behalf of a non-RU applicant is not considered a transfer.

3.7.4 Cancellation

Cancellation refers to the phase between final allocation and the train run. Cancellation can refer to one, several or all running days and to one, several or all sections of the allocated path.

In case a path has to be cancelled, for whatever reason, the cancellation has to be done according to national processes.

3.7.5 Unused paths

If an applicant or designated RU does not use the allocated path, the case is treated according to the national rules.

3.8 Exceptional transport and dangerous goods

3.8.1 Exceptional transport

PaPs and RC do not include the possibility to manage exceptional consignments (e.g. out-of-gauge loads). The parameters of the PaPs and RC offered have to be respected, including the published combined transport profiles.

Requests for exceptional consignments are forwarded by the C-OSS directly to the IMs/ABs concerned for further treatment.

3.8.2 Dangerous goods

Dangerous goods may be loaded on trains using PaPs or RC if both international and national rules concerning the movement of hazardous material are respected (e.g. according to RID – Regulation governing the international transport of dangerous goods by rail).

Dangerous goods have to be declared, when making a path request, to all IMs/ABs on the Corridor.

3.9 Rail related services

Rail related services are specific services, the allocation of which follows national rules and partially other deadlines than those stipulated in the process of path allocation. Therefore, the request has to be sent to the IMs/ABs concerned directly.

If questions regarding rail related services are sent to the C-OSS, he/she contacts the IMs/ABs concerned, who provide an answer within a reasonable time frame.

3.10 Contracting and invoicing

Network access contracts are concluded between IMs/ABs and the applicant on the basis of national network access conditions.

The C-OSS does not issue any invoices for the use of allocated paths. All costs (charges for using a path, administration fees, etc.) are invoiced by the relevant IMs/ABs according to national rules.

3.11 Appeal procedure

Based on Article 20 of the Regulation: in case of complaints regarding the allocation of PaPs (e.g. due to a decision based on the priority rules for allocation), the applicants may address the relevant Regulatory Body (RB) as stated in the Cooperation Agreement signed between RBs on the Corridor.

For a link to the Cooperation Agreements among the RBs refer to the CID of each Corridor.

3.12 Table of deadlines

Date / Deadline	Date in X- System	Description of Activities
9 January 2023	X-11	Publication of PaP Catalogue
10 January 2023 – 23 January 2023	X-11 – X- 10.5	Correction phase (corrections of errors to published PaPs)
11 April 2023	X-8	Last day to request a PaP
17 April 2023		Last day to inform applicants about the alternative PaP offer
24 April 2023	X-7.5	Last day for C-OSS to send PaP pre- booking information to applicants
3 July 2023	X-5	Publication of draft timetable
4 July 2023 – 4 August 2023	X-5 – X-4	Observations and comments from applicants

Date / Deadline	Date in X- System	Description of Activities
25 April 2023 – 16 October 2023	X-7.5 – X-2	Late path request application phase via the C-OSS
22 August 2023 – 13 November 2023	X-3.5 – X-1	Late path request allocation phase
21 August 2023	X-3.5	Publication of final offer
26 August 2023	X-3	Acceptance of final offer
9 October 2023	X-2	Publication of RC
10 December 2023	Х	Timetable change
10 October 2023 – 14 December 2024	X-2 - X+12	Application and allocation phase for RC

ANNEX 5.2 Rules for the calculation of minimum access package tariffs

1. Regulations

Decree-Law 95/2015, from May 29th, appointed the public service management of the national rail network to IP and its right to charge tariffs for the use of the infrastructure.

IP undertakes three main activities within the scope of managing the infrastructure: maintenance management, traffic command, control and safety management and the management of the rail infrastructure capacity.

The conditions regarding the rail transport service and the management of the infrastructure are contained in Decree-Law No. 217/2015.

2. General Guidelines for tariff calculation

In the first year (2020), the fees concerning the minimum access package were determined considering the costs directly attributable to the provision of railway transport services (calculation of DUC), combined with the market components. In that context, the reference year for calculating the costs and used capacity was 2017 (last period ended at the calculation date).

The tariffs for 2024 result from updating the cost benchmark for determining the DUC, corresponding to the average of the actual values for the years 2017 to 2021.

For the infrastructure charge, the implementation factor applicable to the freight and marches segments is also added.

3. Fee calculation formula

The fee due for the provision of the Minimum Access Package associated with the use of a train path is set as follows:

$$TUI = \sum_{i=1}^{n} T_i \times CK_i$$

Where:

TUI – Charge for providing Minimum Access Package when using a train path for a rail composition.

i - Line in operation

Ti – Base charge defined in the Network Statement for each line, depending in the traction used, market segment, train schedule and train length

CKi – Distance actually covered by a rail composition in each line in operation.

The collection of the charge that are due for the Minimum Access Package taking into consideration all the capacity actually used by each Railway Undertaking in the period covered by the invoice.

3.1. Tariff calculation formula

The calculation to set Minimum Access Package tariffs is as follows:

$$Ti = CUD \times P_1 \times C_{2i} \times C_3 \times C_4 \times F$$

Where:

Ti – Base charge defined in the Network Statement for each line, depending in the traction used, market segment and train schedule;

CUD – Direct Unit Cost;

P1 – Utilisation of Overhead line Infrastructure and Platforms Component;

C2i -Search for Line Component;

C3 – Train Schedule component;

C4 – Market Segment Component;

F – Implementation Factor.

The Direct Unit Cost, or DUC, is calculated by dividing the costs directly attributable by the capacity effectively used, within the scope of the network, thus representing the average applicable value. The directly attributable costs are described in paragraph 4 of the present Annex. In this context, DUC translates the additional cost of each ck produced.

Considering the calculation based on the real costs and used capacity of the reference period, as regards Implementing Regulation (EU) 2015/909, DUC is equal to 2,17 \notin /ck.

The component – Utilisation of overhead line infrastructure and platforms (P1) – translates the difference in the allocation of costs to the cks carried out by trains with or without electric traction, using or not the platforms at the stations. The costs considered in this parameter are those directly attributable to the utilisation of the overhead line and platforms, in other words, the costs that are deem to vary according to the passage of a train:

P ₁	DIFFERENTIATION	
Electric with use of platforms	Allocation to the average DUC of the costs directly attributable to the use of overhead line and platforms	
Electric traction without use of platforms	Allocation to the average DUC of the costs directly attributable to the use of overhead line and Deduction from the average DUC of the costs directly attributable to the use of platforms	
Diesel traction with use of platforms	Deduction from the average DUC of the costs directly attributable to the use of overhead line	
Diesel traction without use of platforms	Deduction from the average DUC of the costs directly attributable to the use of overhead line and platforms	

The component – Search for Line (C_{2i}) – is organised into three categories related to the volume of traffic in cks and the extension of tracks in each line, which results in the following distribution:

CATEGORIES	LINES
Type A Lines - structuring lines of RFN most sought out/valued	Minho Line, Braga Branch Line, Norte Line, Guimarães Line, Lousã Branch Line, Alfarelos Branch Line, Tomar Branch Line, Sintra Line, Cintura Line, Cascais Line, Sul Line, Concordância de Agualva, Concordância de Bombel, Concordância de Sete Rios, Variante de Alcácer
Type B Lines - lines of mixed utilisation between passengers and goods with a traffic complementary to that of Type A lines.	Douro Line, Beira Alta Line, Beira Baixa Line, Vendas Novas Line, Alentejo Line, Sines Line, Algarve Line, Concordância do Poceirão, Concordância de Verride, Concordância Norte do Setil
Type C Lines - lines of residual utilisation mostly used by regional RUs of goods and passengers	Remainder

The component – Train Schedule (C_3) – is in line with the priority table contained in the Paragraph 4.6 of this Network Statement,. For charging purposes, the considered period takes into account the scheduled departure.

TRAIN TIMETABLE DEPARTURE	WEEK DAYS	SATURDAYS, SUNDAYS AND OFFICIAL HOLIDAYS
Low Periods	00h00 – 05h59 20h45 – 23h59	00h00 – 05h59 20h45 – 23h59
Regular Periods	10h00 – 16h30	06h00 – 20h44
Peak Periods	06h00 – 09h59 16h31 – 20h44	NA

The component – Market Segment (C_4) – classifies the existing offer based on the type of provided path. The segments currently considered for charging purposes can be seen in the table below:

MARKET SEGMENT	DEFINITION FOR CHARGING PURPOSES		
Regional	 Regional trains make up all regular passenger services. The trains that meet the characteristics indicated for the types of service below are not regarded as regional trains: Urban and suburban, Regular Long Distance, High Quality Long Distance 		
Urban	The urban trains make up all regular service serving commuting flows of passengers in urban centres and		

MARKET SEGMENT	DEFINITION FOR CHARGING PURPOSES
	between those centres and the respective suburbs. In addition to that, urban trains undertake routes up to 80km with an average distance between stops of up to 10 km inclusive. The average distance between stops calculates the number of km on average run between stops for a given train and route.
Regular Long Distance	The regular long distance trains are regular trains providing a distinct service with market seats.
High Quality Long Distance	The high quality long distance trains are regular trains providing a distinct service with market seats. Additionally, the high quality long distance trains undertake routes with distances of more than 300km
	and with average distances between stops of more than 30km.
International	Regular service passenger trains which cross at least one border and run beyond the first station of the neighbouring network
Special	Special trains are passenger services intended for responding to the request for additional capacity associated with events or services of a tourist nature.
	The request for services of this nature can be made by an agent external to the Railway Company or by the Railway Company itself.
Freight	Trains dedicated to the freight transport.

MARKET SEGMENT	DEFINITION FOR CHARGING PURPOSES
Empty Runs	The trains running empty, that is, without any commercial objective, for example, for training purposes.

The following table presents the parameterisations applied to the fees contained in this Network Statement.

FEE COMPONENTS		ALLOCATION PARAMETERS	PARAMETER VALUE
Direct Unit Cost	DUC	Single value	2,17
		Electric Traction with Platforms	1,0199
Utilisation of infrastructures	P ₁	Electric Traction without Platforms	1,0133
overhead line and platforms		Diesel Traction with Platforms	0,9137
		Diesel Traction without Platforms	0,9072
		Type A Lines	1,00
Search for Line	C _{2i}	Type B Lines	0,90
		Type C Lines	0,85

FEE COMPONENTS		ALLOCATION PARAMETERS	PARAMETER VALUE
	C ₃	Peak Schedule	1,00
Train Schedule C ₃		Regular Schedule	1,00
		Low Schedule	0,85
	C ₄	Runnings	1,00
		Goods	1,00
		Urban	1,25
Market		Regional	1,00
Segmentation*		Regular Long Distance	1,25
		High Quality Long Distance	1,30
		International	1,00
		Special	1,25
Factor of F Implementation		Applicable to the market segment goods and runnings	Table bellow

*The present price list provides for the possibility of distinguishing the passenger segments according to whether or not there is a provision of public service. The current Network Statement does not establish a differentiated price list due to the fact it does not find any grounds for such distinction.

The Implementation Factor (F) - involves the progressive introduction of the fees for infrastructure use, the value of which significantly increases as a result of the revision for application of the calculation method, considering the DUC adjusted to Implementing Regulation (2015/909), in compliance with the provisions in Recital 18 of said Regulation. The application of this factor mitigates the introduction of the new price list, thus ensuring a progressive transition to such list.

The Implementation Factor is applied to the final value of the fee and solely to the freight and empty runs segments, since these are the segments in which the new price list is deemed to bring about larger changes, wherefore the intention is to introduce it progressively, as presented in the bellow table.

YEAR	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029
Factor applied to the tariff	81,0%	82,0%	83,0%	84,0%	85,0%	86,5%	88,5%	91,0%	94,5%	99%

The fee table published in <u>section 5.3.</u> already integrates the Implementation Factor, however, by decision of the Mobility and Transport Authority (AMT), the value of 84.0% was applied for 2024.

4. Directly attributable costs

The direct costs that are attributed are related with the upkeep and maintenance of the infrastructure and the equipment and facilities used to provide the services, staff, facilities, security, cleaning, water and electricity, equipment systems and telecommunications.

Concerning all costs considered, there is a direct link between these and the provision of the following services:

- a) handling of requests for railway infrastructure capacity;
- b) the right to utilise capacity which is granted;
- c) use of the railway infrastructure, including track points and junctions;

- d) train control including signalling, regulation;
- e) use of electrical supply equipment for traction current, where available;
- f) all other information required to implement or operate the service for which capacity has been granted.

As regards the costs that are directly attributable to the use of the track, points and junctions, IP only considers those that arise directly from activities destined to guarantee the management and supervision of the track and bridges and tunnels, the maintenance and upkeep of the track includes the track itself, points, walls and fences, the maintenance of bridges and tunnels, including aqueducts.

As regards the costs that are directly attributable to traffic control, IP only considers those that arise directly from activities to maintain an upkeep control systems such as signalling, CONVEL and train to ground radio and traffic control, particularly regarding resources in the central traffic control post, the other control posts and in the parts of the stations used to this effect.

As regards costs that are directly attributable to providing information to the Railway Undertakings, these include costs regarding the information needed for the service, for which the capacity was granted, and does not include information regarding traffic command or commercial information provided to the Railway Undertakings and passengers in the stations.

The only costs directly attributable to the passenger stations regarded are those which directly arise from management activity and supervision of maintenance and conservation of platforms and their accesses, including roofs, lifts and escalators and respective energy consumptions.

As regards costs that are directly attributable to the use of equipment and infrastructures to provide, transform and distribute electric energy for traction, IP only considers those arising directly from the management and supervision of the maintenance and upkeep and the maintenance and upkeep itself.

In that context, some of the costs arising from activities allocated to the minimum access package were excluded from the costs eligible for DUC calculation:

- Communication and transmission of data concerning train movements
- Ground-to-train radio;

- Activities of command, supervision and management of substations, sectioning points and transformers;
- Security of facilitates at the station, including video surveillance equipment;
- Cleaning and water consumptions in passenger station;
- Fencing.

The costs indicated below were not included since they are not covered by the minimum access package:

- Railway relief;
- Hourly timetables and sound warnings with information concerning arrivals and departures, with indication of the respective platforms and boarding and disembarkation tracks.

5. Tariffs to be applied in the 2024 Timetable

By decision of the Mobility and Transport Authority (AMT), the tariffs of the minimum access package to be applied in the 2024 Timetable in the freight and empty runs segments are limited to a variation of +2.90% compared to 2023, corresponding to the variation of the consumer price index for 2024, as determined in the State Budget of 2024.

The mentioned update for the freight and empty runs segments assumes:

- The stabilization of the progressive implementation factor related to the Implementing Regulation (EU) 2015/909 direct costs, at 84% corresponding to the year 2023;
- The non-update of the Direct Unit Cost in these segments, maintaining the 2023 benchmark equally.

The tariffs published in <u>section 5.3</u>. reflect the imposed metric.

ANNEX 5.4.1 Methodology for settlement of traction power consumption

The present Annex uses the following abbreviations and acronyms:

- CP Comboios de Portugal
- RU National or International Railway Undertaking
- FIET Fixed Installations for Electrical Traction
- IP Infraestruturas de Portugal
- NRN National Railway Network

PMSC Power Measurement System in Compliance with ETI-ENE and the standard EN 50463

- DCS Ground Power Data Collection System
- SST Traction Substation
- HEC Holder of the Power Contract

1. General Scope and Rules

The present Annex establishes the general principles according to which electrical energy is provided for traction purposes through the Fixed Installations for Electrical Power (FIET) of the National Railway Network (NRN) to the Railway Undertakings (RU).

Electrical energy for traction is regarded as all energy that is supplied to the rolling stock, irrespective of its use for traction systems or for the respective ancillary equipment, as lighting systems, air-conditioning system or other.

This document also lays down rules related to the determination of costs and consumptions to be attributed to each of the RU.

As a result of the obligation imposed by Community legislation, contained in Article 1, paragraph 3 of Implementing Regulation (EU) no. 2018/868, amending Regulation (EU) no. 1301/2014 on the Technical Specification for Interoperability for the Energy Subsystem (TSI ENE), the State Members must ensure the implementation of a settlement system able to receive the DCS data and to accept them for billing purposes by 04/07/2020 (Article 9). This obligation is already encompassed by the rules and methodologies defined in the present annex. By 1 January 2022, the State Members shall also have to ensure the implementation of a ground energy data collection system (DCS) capable of carrying out energy billing data transfers (paragraph 7.2.4.).

2. Compensations for supply of energy failure

2.1. Resulting from IP maintenance actions or event of force majeure

There is no obligation to compensate on part of IP on account of lack of energy for traction when such is due to scheduled maintenance operations or events of force majeure.

2.2. Liability of Railway Undertakings

In case of lack of energy due to interruption or failure in supply attributable to one or more RUs, the compensation payable to the affected RUs shall be credited to these by the RUs liable in proportion to the responsibilities that are imputed to them, the ascertainment of such compensations being incumbent upon IP.

2.3. Liability of the energy supplier or distributor

In case of lack of energy due to interruption or failure in supply attributable to the respective energy supplier or distributor, the compensation payable and effectively paid shall be credited to the RUs in proportion to the consumptions that are imputed to the affected traction substation (SST), the ascertainment of such compensations being incumbent upon IP.

3. Holders of Contracts (HEC) for Electrical Energy for traction at the NRN substations

The list of the energy supply contracts, considering the situation at the date of edition of the present Network Statement, is as follows:

SUBESTAÇÃO DE TRAÇÃO	TITULAR DO CONTRATO	
Vila Fria	IP	
Irivo	IP	
Fatela	IP	
Ródão	IP	
Fogueteiro	IP	
Monte Novo - Palma	IP	
Ermidas - Sado	IP

Paço de Arcos	СР		
Carcavelos	СР		
São Pedro	СР		

4. Acquisition of electrical energy for traction

4.1. Acquisition from IP

In case of interest on part of the RUs, IP may supply electrical energy for traction, through a written request with the express acceptance of all rules of the Network Statement on such subject.

Even when there is an agreement as to the supply of electrical energy for traction, IP is not responsible in case, according to the law or other instrument of mandatory observance, of the supervening impossibility of full or partial compliance with the agreement, in which case the agreement shall be terminated or reduced pursuant to the law, without prejudice to the application of the general principles of force majeure.

4.2. Acquisition from third parties

Any RU may express its interest in becoming a holder of any contracts for supplying energy to the SSTs, the granting of such contract requiring a written agreement between the RUs that exist in the sections supplied by the respective SSTs and IP.

If agreement among operators cannot be reached by all RUs, the contract under discussion will be held by IP.

5. Access to the electrical infrastructure

IP grants to the RUs access to the means under its management for reception of the electrical energy for traction that they acquire from third parties and that they need for their activities.

6. Administrative services

6.1. Typology of administrative services

There are two levels of administrative services resulting from the use of each SST:

- Simple Service assessment of data at SST, the HEC of which is IP, and in which there is one single RU or when all RUs agree to a consumption allocation key;
- Complex Service assessment of data and consumption allocation at SST, regardless of HEC, and in which there is no agreement between all RUs in the application of a consumption allocation key, or when the consumption key does not contemplate all RUs.

IP shall provide to the RUs:

- a) on a monthly basis, the copies of the energy invoices of the substations in which it is the HEC.
- b) the result of the calculation of consumption distribution and costs, on a monthly basis.

The list of SSTs, considering the situation at the date of edition of the present Network Statement, is as follows:

SUBSTATIONS
Vila Fria ^(*) ; Irivo; Fatela; Ródão; Monte Novo-Palma; Ermidas do Sado; Santiago do Cacém; Luzianes; Tunes.
Vila Franca de Xira; Amadora; Fogueteiro.

^(*) SST to integrate the consumption allocation key

Any change of context that leads to the revision of the 2 typologies referred to above shall be communicated in writing by IP to the RUs.

6.2. Tariffs of administrative services

The monthly tariffs for provision of these services are as follows, by typology:

- Simple Service 162,24 € per installation and per RU;
- Complex Service 486,72 € per installation and per RU.

Value added tax is added to the amounts ascertained.

7. Meters and supply of data

7.1. Characteristics of the meters

The installation of PMSC is mandatory for new, adapted or renewed vehicles, according to article 3, paragraph 4 of Commission Regulation (EU) No. 1302/2014 of 18 November 2014, concerning a technical specification for interoperability relating to the 'rolling stock — locomotives and passenger rolling stock' subsystem of the rail system in the European Union. The characteristics and specifications to be observed by these systems are those indicated in the standard EN 50463 3 – Energy measurement on board trains, including:

- a) Energy measurement function (EMF);
- b) Data management system (DMS);
- c) Location function;
- d) Internal clock;
- e) Communication system.
- 7.2. Communication of data
 - 7.2.1. Motive power equipped with PMSC

The RUs shall communicate to IP by the third working day of each month, in relation to the preceding month, the monthly record of the data of the trains carried out. This data must contain the specifications of standard N 50463 and be sent as per the reference integration period, including:

a) Date and hour generated by an internal clock, with the following structure: year, month, day, hour, minute and second. The resolution must be 1s;

- b) Energy data: It must be broken down in consumed and generated active energy (Wh) and consumed and generated reactive energy (vArh), and may be sent in the following formats:
 - Energy total values;
 - Energy variations between each submission of data;
 - Both.
- c) Geographic position of the motive unit expressed in latitude and longitude;
- d) Identification code for each certified meter (ICCM);
- e) Quality Codes. The codes are generated according to the degree of trust on the certainty of the energy, geographic and temporal data ascertained;
- f) Traction System Code. Attribution of a code related to the nature of the electrification system in which the traction unit runs.
 - 7.2.2. Motive power not equipped with PMSC

RUs must also report to IP, by the last working day of each month, in relation to the preceding month:

- a) Energy Data:
 - As for traction units not equipped with meters, the estimated specific consumption;
 - As for traction units equipped with energy and distance totalising meters, the monthly consumption and the distance run;
 - As for traction units equipped with energy and distance partial meters, the monthly consumptions and the distance run per integration period;
- b) For the separation of consumptions per SST:
 - Monthly list of all trains which run in the csv format, composed of the following data:
 - o Train number;
 - o Date;

- Identification of the number(s) of electrical traction unit(s) used;
 - In case the traction is altered during running, the alteration dependency and the new traction used.
- For freight trains, the gross ton-kilometre hauled (TKBR);
 - In case the load is altered during running, the alteration dependency and the new load hauled.

Additionally, the RUs shall send to IP, on a monthly basis, the copies of the energy invoices of the SSTs in which they are HEC and in which there is no agreement between all the RUs as to the allocation of consumptions.

IP and the RUs are entitled to check the electrical power data and collect them at any time.

7.2.3. Communication of data resulting from a DCS

In case of a RU that communicates its consumptions directly to a ground energy data collection system (DCS), that same data must be subsequently communicated by the respective DCS to IP's settlement system, in compliance with the following requirements:

- a) The data sent on a monthly basis to the webserver (address to be provided by IP)
- b) The format of the files may be csv.

7.2.4. Exclusions

In the SST where the IP is not a TCE and there is an agreement for sharing consumption between the EFs, the IP may be exempted from providing the information mentioned in point 7.2.2. In these situations it is the responsibility of the TCE to collect and process these data.

8. Consumption Allocation Process

8.1. Substations used by one single Railway Undertakings

In these substations, the total invoicing of the energy sales company is reflected in the single RU that uses electrical traction.

8.2. Substations used by various Railway Undertakings

8.2.1. Full Method

In SSTs in which there are various RUs and regarding which paragraph 8.2.1 does not apply, the following procedure shall be adopted:

- The RUs send the data to IP, on a monthly basis, according to paragraph 7.2:
- IP calculates the costs/consumptions in each SST for each RU, considering the trains running in the SST area of influence and the information submitted by the RUs;
- IP carries out the allocation of the invoice costs regarding each SST among the various RUs;
- In the absence of all data necessary for calculating the consumptions, IP shall resort to estimated or theoretical data, which shall be updated in the month following the receipt of the missing data.

The method above indicated shall be adjusted according to the data available.

8.2.2. Simplified Method

At the SSTs regarding which there is an agreement between all RUs as to the allocation of energy for traction and for which an allocation key, to be provided by the RUs, is established, IP shall proceed to apply, on a monthly basis, the referred to allocation key to the invoices it holds. Potential invoice adjustments subsequently made between the RUs are unrelated to IP.

The remaining HEC shall proceed similarly.

9. Payment

9.1. Payment of administrative services

The provision of administrative services is ensured through payment to IP of the monthly sums defined in paragraph 6.2.

9.2. Payment of consumptions of electrical energy for traction

IP shall invoice the amounts of electrical energy for traction consumed in each month by each RU, according to the allocation process described in this Annex.

In case of delay in the provision of data to the RUs and so that IP proceeds to pay the invoice of the month under analysis, an invoice shall be generated for the amount corresponding to the monthly average sum of the consumption of the preceding six months, the adjustments being made in the month following that of the receipt of the missing data.

ANNEX 7.1 Model of the Services Facilities Information Document

CHAPTER NUMBER	HEADING	IMPLEMENTATION GUIDE	SUGESTED TEXT
	VERSION CONTROL	All previous versions of this information should be identified, together with a short description of the changes.	
	TABLE OF CONTENTS		

Article 5 (2) of Implementing Regulation 2017/217 states that 'Infrastructure managers shall provide a common template to be developed by the railway sector in cooperation with regulatory bodies by 30 June 2018 that operators of service facilities may use to submit the information.'

This Common Template for Service Facilities is the result of a solution developed by RNE and IRG-Rail in cooperation with the railway sector and is aimed at supporting the Service Facilities Operators (SFO) in producing the information documents according to the requisites of Implementing Regulation 2017/2177. SFOs can choose to adopt this common template or develop their own specific template, to be published on their own website or a common portal, as long as the legal requisites are met.

While using this template, the following legend is applicable (this segment is for the consideration of the editor only and should not be featured in the SF document):

- Requirements in standard font are mandatory in any case according to Article 4 (2) IR 2017/2177
- Requirements in italics are mandatory where applicable according to IR 2017/2177
- Letters in brackets refer to the IR 2017/2177 applicable paragraphs of article 4 or other identified articles
- Exemptions may be granted by the Regulatory Bodies (RBs) on a case by case basis
- All remaining information is optional

	 Explain the purpose of this document. Identify the SF name and type according to Directive 2012/34 Annex II Give a brief presentation of the SF. State where the document is published 	SF name] produced this SF document in respect of EC Implementing Regulation 2017/2177. [SF name] is a (choose one or more categories from a)
